HOW MEDIEVAL JEWS STUDIED CLASSICAL ARABIC GRAMMAR: A KŪFAN PRIMER FROM THE CAIRO GENIZAH*

Nadia Vidro

Bar Ilan University

1. Introduction

Medieval Jews in Islamic lands spoke and wrote Arabic. Immersed in the Muslim culture, they appropriated knowledge in many areas that was developed by Muslim scholars on the basis of Greek knowledge. But did Jews have an interest in Arabic linguistics, the discipline devoted to the very language that they spoke and wrote? Although Jewish grammarians were clearly familiar with works on Arabic grammar and borrowed concepts, terminology and entire book passages from Muslim linguists,¹ knowledge of Arabic grammatical theory does not seem to have been widespread among Jewish intellectuals. Indeed, in the introduction to his main work *Kitāb al-luma'* (first half of the 11th century), the preeminent Hebrew grammarian, Yona Ibn Janāḥ complained that Jews “conversant and skilled” in Arabic grammar were few.² Moreover, book lists discovered in the Cairo Genizah³ mention Muslim books in many disciplines, such as medicine, philosophy and sciences; as well as belles-lettres, and pietistic Muslim literature, but do not include grammatical works that can be clearly identified as grammars of Arabic. To this day, very few Judaeo-Arabic grammars of Classical Arabic have been identified, and only one has been published.⁴

* We would like to thank the three anonymous referees for insights and helpful suggestions. Nadia Vidro's research for this article was carried out as part of the project “Lengua y literatura judeo-árabe de la Edad Media a la Edad Moderna,” (MINECO, FFI 2010-20568).

³ See Allony, *Jewish library*.

⁴ An overview of the identified Judaeo-Arabic grammars of Classical Arabic is in preparation by the authors of the present article.

Copying works by Muslim writers in Hebrew characters was a common practice in the Middle Ages as Jews were more familiar with the Hebrew script.⁵ Yet the Judaeo-Arabic grammars were clearly not the only grammars of Classical Arabic accessible to Jewish intellectuals who could read and study grammars of Arabic language in the Arabic script. Rather, the significance of the Judaeo-Arabic grammars of Classical Arabic lies in the fact that like any transliterations they represent a means of appropriating knowledge that originated outside of the Jewish culture.⁶ Unlike Jewish grammarians' use of Arabic grammatical texts to create descriptions of Biblical Hebrew, the transliterated grammars demonstrate Jewish interest in Arabic grammar *per se*.

The only grammar of Classical Arabic copied in Hebrew characters published to date was discovered by N. Basal in the Firkovitch Collection, housed in the National Library of Russia in St. Petersburg.⁷ The grammar (RNL Evr.-Arab. II. 290) is an adaptation of an early pedagogical grammar of Arabic *al-Luma' fī al-'arabiyya* (*al-Luma' fī al-naḥw*) by the important 10th century grammarian Abū al-Faḥḥ 'Uṭmān Ibn Jinnī. The Judaeo-Arabic adaptation follows the plan of the original work but is not a straight representation of *al-Luma'*: some chapters are transliterated verbatim, from others only selected passages are copied, still others are represented by summaries of the material in Ibn Jinnī. It is uncertain whether the adaptation was produced by a Jew, or by a Muslim and then copied in Hebrew characters by a Jew.

Recently, fragments of another Judaeo-Arabic grammar of Classical Arabic have come to light in the Taylor-Schechter Genizah collection (henceforth, the T-S grammar). This grammar is interesting from two different perspectives: the Judaeo-Arabic and the Arabic. Firstly, it expands the tiny corpus of Classical Arabic grammars transmitted in Jewish manuscripts. Thanks to certain physical and orthographic features of the fragments it is possible to get an idea about the history of this grammar's transmission and about its scribe: was the grammar originally composed in Arabic or in Judaeo-Arabic? Was this a private copy or a manuscript produced on commission? Was the scribe Jewish or a recent convert to Islam? Was he educated in Classical Arabic and in the Arabic grammatical tradition? Answers to these questions can add to our understanding of the functional context of Judaeo-Arabic grammars of Classical Arabic. Secondly, the

⁵ On the transcription of Arabic works into Hebrew alphabet, see Steinschneider, "Schriften der Araber"; Langermann, "Arabic writings."

⁶ See Langermann, "Arabic writings," pp. 137, 139–140. On the inter-cultural appropriation of knowledge, see Sabra, "Appropriation."

⁷ Basal, "Medieval Jewish and Muslim cultures."

T-S grammar is of interest for the history of the Arabic grammatical tradition *per se*. To the best of our knowledge, the fragments contain a Judaeo-Arabic version of an otherwise unknown grammar of Classical Arabic, which does not belong to the mainstream of the Arabic grammatical tradition. Indeed, the text can be identified as a pedagogical grammar that reflects terms and theories ascribed in the sources to the so-called Kūfan grammarians, the only one of its kind that has so far been discovered.⁸ Its Kūfan tendency allows us to date the grammar to no later than the early 11th century, when the last known “Kūfan” grammarian is likely to have died.⁹ Palaeographic evidence suggests that the grammar was transliterated into Hebrew characters towards the end of the 11th century.

In this article we present an edition of the newly discovered grammar, followed by a discussion of its grammatical and pedagogical traits and an attempt to answer questions related to its transmission in Judaeo-Arabic.

2. Description of fragments

In its present state the T-S grammar of Classical Arabic is represented by three fragments: T-S Ar.31.254, T-S 24.31 and T-S AS 155.132. The fragments belong together and are part of a rotulus, a long narrow strip of paper with writing parallel to its shorter side. T-S Ar.31.254 (32x19 cm) consists of two sheets of paper glued together and is torn at the bottom. T-S 24.31 (57x18–19 cm) consists of three sheets glued together and is torn at the top. At the bottom of T-S 24.31 another sheet must have been stuck on as the recto ends in midtext on a place of glueing, with its last line consisting of upper halves of letters. T-S AS 155.132 (13x18.4) may have belonged to this now missing sheet. All three fragments have holes, and are badly rubbed and stained.

The rotulus bears three texts. Originally it held a petition to a dignitary,¹⁰ penned in large Arabic characters. Such state documents were written on only one side of the paper and laid out with wide spaces between the lines, which made them very attractive for recycling as writing paper for other texts.¹¹ Our document includes two such secondary texts. Firstly, at the top of both recto and verso of T-S Ar.31.254 two short passages from a grammar of Classical Arabic have been copied in Arabic characters. Secondly, a Judaeo-Arabic grammar of Classical

⁸ But see footnote 137.

⁹ See Sezgin, *GAS*, p. 150. See also Carter, “Development of Arabic linguistics,” p. 265.

¹⁰ On petitions addressed to dignitaries below the rank of a caliph, see Khan, *Arabic legal and administrative documents*, pp. 379–409.

¹¹ Rustow, “A petition,” pp. 17, 22.

Arabic has been copied on the blank side and between the lines of the original petition.

The original petition is found on what is currently the verso of the three fragments. T-S Ar.31.254v carries the opening formula of the petition and T-S 24.31v the closing formula. T-S AS 155.132v is part of a rescript, penned in smaller Arabic characters, on what was, probably, the lower part of the same rotulus as the petition itself.¹² Hence, the petition can be reconstructed as follows: T-S Ar.31.254v, lacuna(?), T-S 24.31, lacuna, T-S AS 155.132v. It is not impossible that T-S Ar.31.254 and T-S 24.31 join directly. Although the area of contact of the fragments in their present state is very small, the following consideration supports this possibility. The separate pieces of paper that were glued together to form the rotulus measure between 24.5 cm and 26 cm long, and carry between 37 and 41 lines of writing. When T-S Ar.31.254 and T-S 24.31 are put together, the distance between the last sticking place on T-S Ar.31.254 and the first sticking place on T-S 24.31 is 25.7 cm and has 45 lines of writing, which roughly corresponds to the length of a single sheet of paper and the density of writing on the preserved fragments.

The above reconstruction of the petition produces the following order of fragments for the grammatical text: T-S Ar.31.254r, T-S 24.31r, T-S AS 155.132r, T-S AS 155.132v, T-S 24.31v (the Judaeo-Arabic text is not found on the verso of T-S Ar.31.254). The grammar is written upside down compared to the original text of the petition and is copied in an Oriental (Egyptian) handwriting of the late 11th century.¹³

As was mentioned above, another secondary text is found in the fragments, namely, four discontinuous short passages (probably pen trials) on the grammar of Classical Arabic, copied in small Arabic characters at the top of T-S Ar.31.254. These passages appear to have been taken from standard grammar manuals.

¹² On the structure and characteristic formulae of Arabic petitions, see Khan, *Arabic legal and administrative documents*, pp. 306–317.

¹³ We thank Prof. Judith Olszowy-Schlanger for her help with the assessment of the handwriting.

T-S Ar.31.254r contains:

- 1) a passage on the division of speech into three parts, viz. nouns, verbs and particles:¹⁴

اقسام الكلام ثلاث اسم وفعل وحرف جأ لمعنا فالاسم قولك رجل وفرس وغلأم

- 2) a passage on the agent and the patient:

فزيد وما اشبه هذا لانك تقول اذا اردت التمييز بين الفاعل وال[مفعول] به ضرب زيد عمر ضرب فعل ماض زيد فاعل عمر مفعول به لانه هو المضروب

T-S Ar.31.254v. carries:

- 1) a list of operators of the genitive, which resembles another such list presented in Ch. 16 of the Judaeo-Arabic grammar:

الحروف التي تخفض ما بعدها
من والى وعن وعلى وكم وسوا وتحت وخلف وامام وقدام وحاشا

- 2) a passage on *kāna* and its sisters(?):

كان ابداء(؟) ترفع الاسماء وتنصب الاخبار التي تاتي(؟) بعد ال[اسم]ا

3. Edition and reconstruction

The text of the grammar is edited here in two versions: in Arabic and in Judaeo-Arabic. The two versions do not simply repeat one another but are each designed to fulfil a different purpose. The Judaeo-Arabic version found in the right column is a near faithful representation of the manuscripts and reproduces all significant scribal mistakes, in particular mistakes in the transliteration and interpretation of the original text in Arabic characters.¹⁵ This version reflects the level of the Jewish copyist's knowledge of the Arabic script and of his familiarity with Classical Arabic sources, such as the Qur'ān. The Arabic edition in the left column is an attempt to reconstruct the original work underlying the Judaeo-Arabic version. The purpose of this reconstruction is not to recover the exact *Vorlage* that served the Jewish copyist, or to classicize Middle Arabic features

¹⁴ On the lack of discrimination between nunated and non-nunated vowels see below, Sec. 4 (7).

¹⁵ The marking of diacritical dots and vowels also follows that of the manuscripts. Common copying mistakes, such as dittography, are corrected in the Judaeo-Arabic version, and mention is made of them in footnotes.

found in the surviving fragments and potentially also in their *Vorlage*. Instead, the reconstruction is intended to make the grammar more easily accessible, firstly, by using Arabic script current in scholarly discourse on the Arabic grammatical tradition, and secondly, by ridding the text of the numerous transliteration mistakes that obscure its meaning. In the reconstruction we use standard orthography, without arguing that this was also the orthography followed in the actual Arabic *Vorlage*. The vocalization of examples in the reconstruction is ours and does not follow the (often erroneous) vocalization of the Judaeo-Arabic fragments.

In the edition square brackets [abc] are used to mark up characters that were originally present in the manuscripts but are no longer legible or are absent due to holes. Inasmuch as the manuscripts are badly rubbed, characters that are even barely legible were not enclosed in square brackets, so as not to clutter the transcription. Since the state of preservation of the surviving fragments is of tangential importance for the reconstruction of the original Arabic work, square brackets are used in the Arabic version only when longer chunks of text are missing. In the Arabic reconstruction angled brackets <abc> are used to mark up editorial additions or emendations. Scribal mistakes are set in **bold** in the Judaeo-Arabic version, and our correction suggestions are incorporated into the Arabic reconstruction without markup. Inasmuch as the two versions are synchronized, finding the relevant corrections should be straightforward.

(1) باب المفعول به والفاعل	באב ¹⁶ אלמפעול בה ואלפאעל
اعلم أن الفاعل رفع أبدا تقدم أو	אעלם אן[ן] אלפאעל רפע אבדא תקדם או
تأخر والمفعول به نصب أبدا تقدم أو	תאכר ואלמפעול בה נצב אבדא [תקדם או
تأخر تقول من ذلك دَخَلَ عَبْدُ اللَّهِ دَارَكَ	תא[כר תקול מן דלך דכל עבד אללה דארך

فِي الْقُرْآنِ ²² ﴿وَقَالَ نِسْوَةٌ فِي الْمَدِينَةِ﴾ ²³ وقال ²⁴ أبو	פי אלקראן וקאל נסוה פי אלמדינה וקאל אבו
عمر[و بن الع]لاء ²⁵ ﴿لَا يَجِلُّ لَكَ النَّسَاءُ﴾	עמר[ו בן אלע]לא לא יחל לך אלנסא

²⁰ In the original text a traditional Islamic formula was probably used.

²¹ Qur'ān 4:75.

²² See footnote 20.

²³ Qur'ān 12:30.

²⁴ Probably a misreading for: رَفَا.

²⁵ Qur'ān 33:52. However, according to most sources Abū 'Amr reads **تحل** here (see 'Umar and Makram, *Mu'jam*, vol. 5, p. 132). It may well be that **تحل** did appear in the original text, adducing Abū 'Amr's reading as a counterexample, but was misinterpreted by the copyist as another illustration of the rule,

באב חרוף אלנסק וחי כמסה	(5) באב חרוף הנסך וחי חמסה
וחרוף אלנסק אלואו ואלפא ותם ואו אולא	וחרוף הנסך הווא ואלפא ותם ואו ולא

⁴⁷ Perhaps: أو, although it is unlikely that aw would appear in such a list without fa- and wa-. It should be noted, however, that the list contains some oddities: *hattā* and *li-an* are not mentioned, only *hattā lā*, and *li-an lā* (and *li-allā*), and *an* is mentioned only towards the end, after *li-allā* and *li-an lā*.

⁴⁸ Perhaps: وللائين.

⁴⁹ It is unclear why the third example contains a verb that differs from the one in the first two, albeit with the same meaning. It might be a copyist's error.

⁵⁰ The derogatory Hebrew designation 'קלון' 'disgrace' stands for what must have originally read القرآن.

⁵¹ See footnote 20.

⁵² Qur'ān 8:33.

⁵³ See footnote 20.

ולפתקו מא הם פנצב בלאם.

وَلْيَقْتَرُوا مَا هُمْ⁵⁴ فنصب بلام

⁵⁴ Qur'ān 6:113.

⁵⁵ The word שדה is written here between the lines, possibly a misinterpretation of a *madd* sign above the word יא.

⁵⁶ جزم يذهب بلم fits here, but another possibility is to emend the text in the following fashion: جزم يذهب بلم; cf. Chs. 14, 16 and 17, where the operators assigning the case/mood in question are pointed out in some of the illustrations.

⁵⁷ Possibly: للاثنين.

⁵⁸ T-S 24.31r.: يذهبوا (ידהבוא). It is highly improbable that the exact same form was repeated in the original. The repetition in the transcription is possibly due to the copyist's misinterpretation of the preformative, since *tā'* and *yā'* differ only in their diacritical dots.

⁵⁹ T-S 24.31r.: يخرجوا (יכרגוא). See the previous footnote.

⁶⁰ Or, albeit less plausibly, مغامل. At any rate, this word is corrupt. Cf. the unrecognized word بحقال (ق) in Sadan, *Edition*, p. 133, footnote 46, also following ازاء. Sadan suggests there that the copyist mixed the two following words, تجاه and قبال. Several possible solutions can be offered for the puzzle of the copyist's error in the T-S grammar. First, in light of the similarity between the two corrupt words, مجامل and بحقال, it is possible that they represent two words of the same root, but of different patterns (cf. قبال in Sadan's edition vs. مغامل in the T-S grammar). Alternatively, it may be suggested that both forms represent the same word, but the T-S copyist, influenced by the adjacent word مغامل, molded it into the pattern *mufa'il*, thus misplacing the *alif*; this original word may have been بحيال (note, however, that بحيال, rather than بحيال, is expected in a list of genitive operators, and indeed appears in such lists in other treatises). Yet another possibility is that מגאמל (in this case, probably مغامل) reflects مغامل, transliterated in this text twice, the first being a mistransliteration.

We would like to thank Dr. Arik Sadan for discussing this issue with us and for kindly providing us with a copy of the manuscript used in his edition.

⁶¹ Possibly: ووسط ووسط (or the other way around) (see Ibn Kaysān, *al-Muwaffaqī*, p. 111; Luğda, *al-Nahw*, p. 225; Ibn al-Sarrāj, *al-Uṣūl*, vol. 1, p. 204); alternatively, one of them may be الأوسط (see Ḥalaf al-Aḥmar, *Muqaddima*, p. 46).

[هذا أخوك] فترفع الأخ بهذا	[חדא אכוך פתרפע אלאך בהדא :

⁶⁴ الرفع: Probably.

⁶⁵ This reconstruction is supported by the fact that the form **חדא** in the manuscript is a correction for **גידא**, which is written with the same Arabic grapheme as **حبدا** in a text without diacritical dots.

⁶⁶ There are three options here for reconstructing the original text: (1) *lawlā 'abdu llāhi* alone; a deletion sign possibly appears above the word *aḥūka* (or at least above the letters **خو** [כּו]), thus this word may have been copied from the next line. (2) *lawlā 'abdu llāhi* followed by a verb (the apodosis), of which *aḥūka* is a corruption, e.g., *lawlā 'abdu llāhi ataytuka*. (3) *lawlā 'abdu llāhi aḥūka* (with no mention of the apodosis). According to most grammarians, the predicate does not appear in the protasis after *lawlā*. Admittedly, some grammarians, most of them relatively late, are said to have held the view that a predicate may appear in this position, e.g., *lawlā zaydun sālamanā mā salima* (see al-Suyūṭī, *Ham*, vol. 1, pp. 336-338). However, in addition to the fact that this view is not ascribed to any Kūfan (or other early) grammarian, there is also a theoretical consideration in favor of the rejection of this reconstruction: the four words *lawlā*, *kam*, *ḥabbadā* and *ḥādā* are grouped here together as operators of the following noun (on *lawlā* see Sec. 6 (3)); this could be explained by the very fact that no further predicative constituent is needed for a construction consisting of one of them + a nominative noun.

⁶⁹ Or: تسمى.

⁷⁰ T-S AS 155.132v.

⁷¹ This word may possibly be emended to تنوين.

⁷² Or: جاء.

⁷³ These words may possibly be emended to مثال أفعال. If the original text read *afāl*, this paragraph revolves around nouns of patterns characteristic to verbs, under which category not only nouns of the pattern *afal* are subsumed, but also, e.g., *yazīd* (a personal name of the pattern *yafīl*). In both cases, *ibrāhīm*, occurring in the sequel two lines down, does not fit as an illustration. If the text read *afāl*, *ibrāhīm* may be a corruption of any personal name of a pattern characteristic to verbs; and if *afal*, it may stand for a personal name of that pattern. It is only possible to read *ibrāhīm* here if part of the text is missing.

אלבחר ונסבוא אלי אלחמה באלחמאני	אלבחר ונסבוא אלי אלחמה באלחמאני

⁷⁴ As for the *tanwīn-kasra* marks under both *aḥmad* and *ibrāhīm* in the manuscript, if they are not errors (see Sec. 4 (7)), they render these nouns illustrations of the rule, mentioned in this paragraph, that if such nouns are indefinite, they are triptotes. However, this rule is generally illustrated in the grammatical literature with such formulae as *marartu bi-aḥmada wa-aḥmadin āḥara* (e.g., al-Zuḥayrī, *al-Wāḍiḥ*, p. 173), whereas here they simply illustrate the category (or categories) of nouns in question, thus the *tanwīn-kasra* is highly unexpected.

وَعَزَوَاتٌ ⁸² وكل ما كان بناؤه على فَعْلَةٍ يرفع	ועזראס וכלמא כאן בנאוה עלי פעלה תרפע

⁸⁰ It is likely that the forms *aḥmar* and *aṣfar* are only mentioned here for the sake of their feminine counterparts used as toponyms, viz. *Ḥamrā'* and *Ṣafrā'*, respectively. The text, however, seems to be corrupt, so that the reconstruction presented here is conjectural.

⁸¹ As it is, the text means that the plural of every noun of the form *fa'la* is sound, which is incorrect (unless the plural of paucity is meant). What is expected here (taking into consideration the formulations of the following sentences) is *jama'tahu*, instead of *JM' JM'*. Moreover, *taqqalta* is expected before the illustrations (see in what follows). Thus, ... كل اسم كان بناؤه على فَعْلَةٍ ثم جمعه بالتاء ثقلت نحو حَمَزَةٌ وَحَمَزَاتٌ ...

אלפא תם זמעתה פקלת קרבה וקרבות	الفاء ثم جمعته ثقلت <نحو(؟)> قُرْبَةً وَقُرْبَاتٍ ⁸³

⁸² Or: وَعَدُوَّةٌ وَعَدَوَاتٌ.

⁸³ Or: قُرْبَاتٍ.

⁸⁴ Or: ظُلُمَاتٍ.

⁸⁵ Or: رُيْنَةٍ وَرُيْنَاتٍ. Our author refers here to a process of substitution of /y/ for /w/, i.e. *kulwa* > *kulya* and *zubwa* (*rubwa*) > *zubya* (*rubya*). *kulwa* is indeed documented as a variant of *kulya* (see WKAS, vol. 1, p. 337) and *rubwa* is considered as the underlying form of *rubya* (see Lane, *Lexicon*, vol. 3, p. 1024). It is also plausible that this statement is a distortion of a view that recurs in the literature, to the effect that /u/ is not added in III-y forms, in order to prevent the substitution of /y/ with /w/ (see, e.g., al-Fārisī, *al-Ḥujja*, vol. 2, p. 269, where the terms *inqilāb* and *qalb* are used, as well as the illustrations *kulya* and *zubya*).

⁸⁶ Or: وَعَبْلَةٌ وَعَبْلَاتٍ.

⁸⁷ On the defective spelling of this word, see Wright, *Grammar*, vol. 1, p. 10.

⁸⁸ It is unclear whether this word stands for *taqqalta*, or for a certain sound feminine plural, in which case *taqqalta* should be restored after it.

⁸⁹ What is expected here is a verb conveying the meaning “become,” “transform,” etc., or, possibly, *tanzilu manzila*.

⁹⁰ Or: أَسْمَا.

באב אלהגא	(24) באב ההגא
אעלם אן כל מא כאן בניתה באלואו ויכתב	אעלם אן כל מא כאן בניתה באלואו ויכתב

⁹¹ T-S 24.31v: וכל מא כאן וכל מא כאן.

⁹² T-S 24.31v: غرا (גרא; see also גירוא below). Although this verb fits here, *gazā* is used in other writings in this context, whereas *garā* was not found at all. See, e.g., Ibn al-Sarrāj, *al-Ḥaṭṭ*, p. 123; al-Zajjājī, *al-Jumal*, p. 270; Ibn Qutayba, *Talqīn*, p. 361.

⁹³ Or: ضحا.

⁹⁴ T-S 24.31v: יכתב באלאלף יכתב באלאלף.

⁹⁵ Or: نحا (see below).

⁹⁶ Or: نجوا (see above).

⁹⁷ See footnote 92.

⁹⁸ The first letter may alternatively be ف (or ق) without the diacritic.

4. Spelling and vocalization mistakes

Over one hundred spelling mistakes are found in this text of ca. 2000 words.⁹⁹ These mistakes are indicative of the history of transmission of the T-S grammar and can tell us something about its scribe. Indeed, different mistakes can be expected in texts produced in different ways. Certainly not an autograph, our text may have been written down to dictation, copied from a text in Hebrew characters or copied from a text in Arabic characters. Mistakes found in the T-S fragments were clearly caused by the nature of the Arabic script. They tally with mistakes described by Arabic grammarians in their treatises on the *taṣḥīf* as well as with mistakes in Latin transliterations of Arabic,¹⁰⁰ and demonstrate that this work was copied into Hebrew characters from an Arabic script *Vorlage*. The following types of spelling mistakes can be identified in the fragments:¹⁰¹

1) Mistakes in letter shapes distinguished in Arabic graphics by diacritical dots

- a) tooth-shaped letters *t/ṭ/b/n/y* (the latter two in the initial and medial positions)

In some cases only one tooth-shaped letter is misinterpreted, e.g., בענד for بعند (Ch. 16) and the opposite وعندري for وعندري (Ch. 20; this word is written in the T-S grammar in Arabic script); פיתבת for فثبت (Ch. 15); באלבא for بالباء (Ch. 23). In other cases two or even three tooth-shaped letters within one word are misunderstood: תנית for ثبتت (Ch. 9); אבאיתא for اياتنا in Qur'ān 20:56 (Ch. 9); זינה for either زينة or رينة (Ch. 23).

b) *j/h/ḥ*

Examples include אלחזם for الجزم (Ch. 15); אלחפט for الخفض (Ch. 16; on *ḍ/z* see 6 below); נחוא for نحو or perhaps the opposite נגא for نحا (Ch. 24).

⁹⁹ For comparison, in the only other published grammar of Classical Arabic in Judaeo-Arabic there is one transliteration mistake (see Basal, "Medieval Jewish and Muslim cultures," p. 254, fol. 4a, l. 1).

¹⁰⁰ See Latham, "Arabic into medieval Latin," p. 34; Van Koningsveld, *The Latin-Arabic glossary*, p. 35; Rosenthal, *The technique and approach of Muslim scholarship*, pp. 24–26; Kopf, *Studies*, pp. 65–78.

¹⁰¹ Arabic originals given in the examples below are based on our reconstruction of the text and include some uncertain readings (e.g., in 2m).

c) *s/š* and the tooth-shaped letters *t/ṭ/n/b/y*

The *s* and the *š* can be confused with each other, e.g., *ויש* for *ويس* (Ch. 16) and *נסבה* for *يشبه* (Ch. 20; note also *n/y* (1a)). In the initial and medial position the teeth of the *s/š* can be understood as the tooth-shaped letters *t/ṭ/n/b/y*, e.g., *שביה* for *يشبه* (Ch. 20), where the initial *y* and the first two teeth of *š* were taken to represent a *š*, the last tooth of *š* was mistaken for *b* and the original *b* was understood as a *y*. In the initial position the first tooth of *s/š* can also be taken for an *m* (see 3b).

d) *r/z*

For instance, *רדת* for *زدت* (Ch. 24). Another example is *אלכמריאת* for *الحمزات* (Ch. 23) where the *alif* of the plural form may have begun with a small tooth, accounting for the redundant *y* in the transliteration (note also *h/ḥ* (1b)).

e) *f/q*

An example of confounding medial *f* and *q* is found in the transliteration of Qur'ān 6:113, where *وليقتروا* is transcribed with *וליפתרקו* (Ch. 14; on the missing *alifotiosum* see 6).

f) *ʿ/ḡ*

Examples include *מעזוי* for *مغزوي* (Ch. 20) and *שגיבא* for *سعيًا* (Ch. 24; note also *s/š* (1c) and *b/y* (1a)).

g) *s/ḍ*

For instance, *נלמת* for *نصبت* (Ch. 16; on confounding *m* with a tooth-shaped letter see 2e); *צחפה* for *ضخمة* (Ch. 23; note also *h/ḥ* (1b) and *m/f* (2g)).

2) Mistakes in letter shapes that are similar but not identical in Arabic graphics¹⁰²a) *w/r* or *z*

For example, *ראפע* for *واقع* (Ch. 16; note also *f/q* (1e)) and the opposite *אוקע* for *ارفع*

¹⁰² A small number of mistakes discussed in this section may be attributed to similarities between Hebrew characters as well as between Arabic characters (e.g., *waw* vs. final *nun* and *d* vs. *r*). However, the compelling majority of the mistakes are clearly due to misinterpreting Arabic graphemes, and there is not a single mistake that cannot be explained as stemming from similarity of Arabic characters.

(Ch. 6); עזרה for غرة (Ch. 23; note also /ġ/ (1f)); אברותה for نوية (Ch. 20; note also *b/n*, *t/y* (1a) and a redundant initial *aleph* (5)).

b) initial *w/f*

For instance, פאדא for اذا (Ch. 14); ויכתב for فيكتب (Ch. 24).

c) initial *l/alif*

The preposition *li-* attached to a noun with a definite article is sometimes re-analyzed as the *alif* of the definite article, showing that in the Arabic original the initial *alif* must have been connected to the following *l*, e.g., אלנצב for للنصب (Ch. 14); ואלמראתינ for وللمرأتين (Ch. 15). The *l* of the definite article can also be lost altogether, e.g., אנסבה for النسبة (Ch. 20); אחמר for الحمراء (Ch. 22; on the missing final *alif*, see 6).

d) medial *q/ʔ*

For example, פקל for فعل (Ch. 24); סקי for سعى (Ch. 24; the same verb in the masculine dual form is transliterated שגיבא in Ch. 24, see 1f).

e) initial and medial *m/tooth-shaped letter*

For example, מחסנין for تحسين (Ch. 14); נצמת for نصبت (Ch. 16; note also *š/d* (1g)); אלתקצא for المقصى (Ch. 20).

f) initial and medial *f/tooth-shaped letter*

Examples include פקלת for ثقلت (Ch. 23); ארפע for اربع (Ch. 23).

g) initial and medial *f/m*

f and *m* can be confounded in transliteration, probably, because in the ductus of the original both were similar to a tooth-shape (compare 2e and 2f above). Examples include פאכרה for ما كره (Ch. 6) and צחפה for ضحمة (Ch. 23; note also *š/d* (1g) and *h/h* (1b)).

h) medial 'š

An example is נַעַת for نَصَب (Ch. 14; note also *b/t* (1a)).

i) *k/l*

k and *l* can be confounded in the initial, medial and final positions, e.g., כַּם for לַם (Ch. 15); יַחֲלִי for יַחֲכִי (Ch. 21); בֶּךְ for בֶּל (Ch. 17).

j) *d* or *d/r* or *z*

An example is אַדָּא for אַזָּא (Ch. 16).

k) medial and final *f/d*

Examples are כַּפְּזַת for خَفְזַת (Ch. 23) and תַּכְּפֶז for تَخْفِז (Ch. 23).

l) final *w/n*

For instance, אַר for אוֹ (Ch. 14).

m) *d* or *d/l*

Examples include גִּפְלַ for عِنْد (Ch. 16; note also 'ġ (1f) and *f*/tooth-shaped letter (2f)); אַלִּי for إِذَا (Ch. 22).

3) Mistakes due to transliterating a combination of letters as a single letter and vice versa

a) *h+r/d*

An example is מַאֲחַ for مَتَأَخِر (Ch. 4; on missing tooth-shaped letters see 4).

b) *š* or *s/m*+a tooth-shaped letter

This mistake is related to the fact that *m* was occasionally confounded with a tooth-shaped letter (see 2e). Examples are מַנְדְּרָאֵת for مَنْدَرَات (Ch. 23); מַתְּאָמִי for شَام (Ch. 22; on the final yod of מַתְּאָמִי see 6).

4) Losing tooth-shaped letters in the initial and medial position

In the beginning and middle of words tooth-shaped letters are occasionally not transliterated: מאַך for متأخر (Ch. 4; on *h+r/d*, see 3a); אכּוּאך for أخواتك (Ch. 4); تشبيه for שביה (Ch. 17); אין for أين (Ch. 17); חּדא for حذا (Ch. 17); עאני for عاني (Ch. 20). An opposite case where an additional tooth-shaped letter is introduced is תתנית for تثبت (Ch. 9; on misinterpreting tooth-shaped letters, see 1a).

5) Mistakes in the transliteration of *alif*

The Arabic *alif* seems to have been mistransliterated especially often. In some cases, an extra *aleph* is added, where it is not expected in the Arabic original, e.g., אולא for ولا (Ch. 5); אדראעי for اذري (Ch. 20). Some of the redundant initial *alephs* may be attributed to dittography, whereby the final *alif* of the preceding word was transliterated twice, e.g., פאדא אתנית for فاذا ثبت (Ch. 4); קאלוא אחמראוי for قالوا حمراوي (Ch. 22). On other occasions, the original *alif* was not transliterated, e.g., כנת where كانت is expected (Ch. 14); אלדרהם where the plural form الدراهم is discussed (Ch. 20); אחמר for الحمراء (Ch. 22; note also the missing *l* of the definite article (2c)). The Hebrew *aleph* can be in a wrong position, e.g., ראינאה for أريناه in Qur'ān 20:56 (Ch. 9) or וזידא אנצבת for وزياداً نصبت (Ch. 5). In addition, some transliterations that differ from the expected Arabic orthography may reflect the Middle Arabic substrate spelling (see 6).

6) Spellings that may have to do with Judaeo-Arabic/Middle Arabic substrate spelling

Some spellings in the manuscript can be explained by the influence of the Judaeo-Arabic (or Middle Arabic in general) spelling conventions and grammar. It is not always clear if these spellings originated with the Judaeo-Arabic scribe or with the scribe of the Arabic *Vorlage*. Thus, the missing *aleph* in וליפתרקו for وليقتروا in Qur'ān 6:113 (Ch. 14) and the additional *aleph* in מסלמוא אלבלאד and צאלחוא עבאד אללה (Ch. 10) can be attributed to the common Middle Arabic fluidity in the marking of *alif otiosum*.¹⁰³ The loss of cases may account for the

¹⁰³ For *alif otiosum* on verbal forms see Blau, *Judaeo-Arabic*, pp. 53-54 (§42-44) and the references there.

untransliterated *alif* of the accusative in אקבל עבד אללה אקבאל חסנא (Ch. 8); לאנהא (Ch. 16), as well as by hypercorrection for the additional *aleph* in נעתא ללכצלה (Ch. 16).¹⁰⁴ It may be for the same reason that we find forms like ימאני for يمان and מתאמי for شآم where the Classical ending *-in* has been replaced by the long *ī* (Ch. 22; on *m*+tooth-shaped letter/*š* or *s* see 3b).¹⁰⁵

The spellings יחדתאני and יחדתוני for the dual and plural imperfect form with a 1sg pronominal suffix respectively, instead of the expected يحدثناني and يحدثنوني, demonstrate the contraction of two syllables with an identical consonant into a geminated consonant, sometimes attested in Middle Arabic.¹⁰⁶ The spelling אלחפט or אלכפט for الخفض (Ch. 16) reflects the merging of the sounds *ḡ* and *ḏ*, characteristic for most Judaeo-Arabic dialects. Although *ḏ* marking the etymological *ḡ* is more common in Judaeo-Arabic texts, the opposite is also attested.¹⁰⁷ This spelling is attested in medieval texts in Arabic script,¹⁰⁸ and it is not impossible that it was found in the Arabic *Vorlage* of the T-S grammar.

Yet this is a grey area, since many of these mistakes have parallels in other cases that cannot be attributed to the Middle Arabic influence. As has been pointed out above, the Hebrew *aleph* can sometimes be missing or redundant without any apparent reason and tooth-shaped letters can be missing. The final *yod* of מתאמי may also be related to the ductus of the Arabic original where the final *m* may have ended in an upward curve, which was mistaken for a *y*. These phenomena would account for the majority of potentially Middle Arabic spellings.

7) The vocalization of the Judaeo-Arabic text

In the treatise sporadic Arabic vocalization is found, both in the examples illustrating the grammatical rules and within the explanations themselves. The majority of the vowels indicate case endings, yet non-inflectional vowels are also

For *alif otiosum* marked on non-verbal forms ending in a *waw*, see Blau, *Christian Arabic*, pp. 127–128 (§28). The latter phenomenon is attested in Muslim manuscripts and thus cannot be attributed to the Judaeo-Arabic scribe with certainty (Blau, *Christian Arabic*, p. 127, n. 28).

¹⁰⁴ Blau, *Christian Arabic*, p. 323 (§221); Blau, *Judaeo-Arabic*, pp. 150–154 (§218–219).

¹⁰⁵ Blau, *Christian Arabic*, pp. 197 (§100.1), 317 (§215).

¹⁰⁶ Blau, *Christian Arabic*, p. 148 (§41.4). However, see Wright, *Grammar*, vol. 1, p. 102 for examples of 2pl and 3pl imperfect forms rejecting the termination *-na* before the 1sg and 1pl suffix.

¹⁰⁷ See Blau, *Judaeo-Arabic*, p. 39 (§23); Blau and Hopkins, “Early orthography,” p. 19n18.

¹⁰⁸ See, for example, Ibn Kaysān, *al-Muwaḥḥaqī*, p. 113; al-Azharī, *Tahḏīb*, vol. 10, p. 358. See Blau, *Christian Arabic*, pp. 113–114 (§20.2–21).

found (examples of the latter case are תָּנִי (Ch. 4), כֹּתֵעַ (Ch. 12), לֵלֶהֱם (Ch. 12), מֹחֶסֶן (Ch. 17), כְּנֹדָה (Ch. 21), زَنْكَمَا (Ch. 14)). It appears that at least in some cases the non-inflectional vowels are provided in order to differentiate between the intended form and other graphically identical forms. The same may apply to the only case of Hebrew vocalization: בֶּאֱבֹכִי וְאֶכְוֹאֲתֶהָ (Ch. 14), where the role of the *pataḥ* may have been to distinguish between the Arabic particle كَي, spelled in Judaeo-Arabic כִּי, and its Hebrew homograph כִּי.

The vocalization is not in full accord with the standard Arabic vocalization. Firstly, the vocalizer did not make a clear distinction between regular and nunated vowels. Thus, *tanwīn ḍamma* is not found in the manuscript, and the same sign is used for *ḍamma* and *tanwīn ḍamma*: קֶאֱם זִיד (Ch. 4) vs. תָּנִי (Ch. 4). Both *tanwīn fatḥa* and *tanwīn kasra* are found in the manuscript alongside their non-nunated counterparts, but the signs are used indiscriminately: רִפְעֵת עֶבְדֹּ אֱלֹלָה (Ch. 5) vs. רִפְעֵת עֶבְדֹּ אֱלֹלָה (Ch. 8); לִקִּית עֶבְדֹּ אֱלֹלָה (Ch. 5) vs. לִקִּיני עֶבְדֹּ אֱלֹלָה (Ch. 5); בְּכֶסֶף אֶלְפָּה (Ch. 23). Secondly, in two cases an incorrect inflectional vowel is used, both times on the name 'Abd Allāh: אֶבְצֶרֶת עֲלִי עֶבְדֹּ אֱלֹלָה תּוֹבָא גִדִּידָא (Ch. 16); רִפְעֵת עֶבְדֹּ אֱלֹלָה בִּמְחֶסֶן וּרְפִעֵת מֹחֶסֶן בְּעֶבְדֹּ אֱלֹלָה (Ch. 17). These mistakes may be grounded in the vocalizer's dialectal pronunciation of the name as 'Abdallāh, without case endings.

Interestingly, a similar confusion between the nunated and non-nunated vowels can be detected in the short passages on Arabic grammar copied in the Arabic script in T-S Ar.31.254: *tanwīn ḍamma* is not used, whereas *tanwīn fatḥa* and *tanwīn kasra* are invariably used at the end of words irrespective of their syntactic position, as well as for final non-inflectional vowels:

اِقْسَامُ الْكَلَامِ ثَلَاثُ اِسْمٌ وَفَعْلٌ وَحَرْفٌ: فَالْاِسْمُ قَوْلُكَ رَجُلٌ وَفَرَسٌ وَغُلَامٌ: ضَرَبَ زَيْدٌ عَمْرًا: بَيْنَ الْفَاعِلِ

An analysis of the spelling mistakes demonstrates that most mistransliterations occur in the examples provided to illustrate grammatical rules or in lists of words (such as a list of operators of the genitive). Qur'ānic quotations are, likewise, replete with transliteration mistakes. Although the mistransliterated words do not fit the context, the absolute majority of them are existing Arabic words. Some non-standard spellings may be grounded in the Middle Arabic grammar and orthography, yet the cases are few and uncertain. A number of Arabic graphemes are found in the Judaeo-Arabic text. The majority of these are very common words (e.g., ثم in Ch. 5, مسكين in Ch. 10, عبد الله in Ch. 17, etc.) and must have been left untransliterated by a slip of the pen. Only in one case it seems likely that the

scribe left a word untransliterated because he was not certain how to read the grapheme: ¹⁰⁹وماني for برقاني in Ch. 20.

The following conclusions can be drawn from the spelling and vocalization mistakes found in the T-S fragments. The Judaeo-Arabic text of the grammar was copied from another manuscript in Arabic script.¹¹⁰ This *Vorlage* was only sparingly provided with diacritical dots and was written in a cursive hand, in which many letters, including those that have distinct shapes in carefully written manuscripts, must have looked very similar. The Judaeo-Arabic scribe could read cursive Arabic script but was not an expert. He knew Arabic well, since very few mistakes resulted in non-words, and the misreadings are often motivated by the context. Thus, in Ch. 4 the Judaeo-Arabic version פעל מאץ instead of the intended فعل متأخر is clearly conditioned by the fact that sentences containing past verbs are discussed. The mistaking of the original form يشبه for its near homograph نسبة נסבה in Ch. 20 is equally understandable in the context of a chapter on the *nisba*. The scribe was not familiar with the text of the Qur'ān, and clearly was not a convert to Islam for not only did he misquote Qur'ānic verses, but also referred to it with a common Jewish derogative term *qalon* ("disgrace"; Ch. 14). The T-S scribe was not educated in Classical Arabic grammar, for he violated Classical Arabic vocalization conventions and clearly did not understand the grammatical analysis. One of the most conspicuous demonstrations of the latter is the interpretation of the tooth element as *b*, where final *y* roots are discussed. This is found in two chapters at the end of the treatise: the chapter on the plural of different فعلة patterns (Ch. 23), where final *w* and *y* nouns are discussed, interpreted by the T-S scribe as final *b*; and in the chapter on the past form of final weak verbs (Ch. 24), where the scribe again read *b* for *y*, which resulted in the chapter discussing final *w* and final *b* verbs. The preserved manuscript is a private copy (on scrap paper), presumably prepared by somebody who intended to use this text to learn the basics of Classical Arabic grammar.

¹⁰⁹ The reading of the Arabic grapheme is uncertain.

¹¹⁰ As was mentioned above (Sec. 4 (2), footnote 102), a small number of mistakes may be attributed to similarities between Hebrew characters, implying that our text was copied not from an Arabic *Vorlage*, but from an intermediate text in Hebrew script. Although these mistakes are few, the possibility of such an intermediary copy, which already had the transliteration mistakes, cannot be excluded. However, this would not significantly alter our conclusions below but would extend them to the scribe who prepared the original Judaeo-Arabic copy.

5. Contents of the grammar

(1) Verbal subject and object¹¹¹

The verbal subject takes the nominative and the object takes the accusative, irrespective of their relative order. Thus, *raḍiya abūka kalāmaka*, but also: *arḍā abāka kalāmuka*.

On *fā'il*, and verbal sentences in general, see Sec. 6 (2). On *WQ'* see Sec. 6 (4).

(2) Adjectival attribute

The adjectival attribute takes the same case as the noun it modifies, e.g., *daḥala 'abdu llāhi l-'āqilu*.

On *na't*, see Sec. 6 (9). On *ḥafḍ*, see Sec. 6 (1).

(3) Annexion

The *nomen rectum* takes the genitive, e.g., *arḍā abāka kalāmu aḥika*.

(4) Verb preposing and postposing

When the verb precedes its subject, it takes the singular form, e.g., *qāma zaydun / l-zaydāni / l-zaydūna / aḥawātuka* (!) and *qāmat uḥtuka / uḥtāka*, whereas when the verb follows the subject, it agrees with it in number, e.g., *al-zaydāni qāmā* and *al-zaydūna qāmū*.

See Sec. 6 (2) for the use of the terms *taqdīm* and *ta'hīr*. See Sec. 6 (14) for a discussion of the assertion that when the verb precedes a subject in the feminine plural it takes the masculine singular form. On the term *naṣb* referring to the final vowel of *qāma*, see Sec. 6 (1) and footnote 183. On the application of the term *fi'l* to a participle, in the so-called *na't sababī* construction, see Sec. 6 (13).

(5) Conjunction

The noun following one of the five listed conjunctive particles agrees in case with the noun preceding it, e.g., *laqītu 'abda llāhi wa-zaydan*.

On *nasaq*, see Sec. 6 (8). Note that the term *ḥarf* as used in the T-S grammar is not restricted to the part of speech 'particle' (this issue will be discussed in a study in preparation).

¹¹¹ The headings of the chapters in this section are not meant as translations of the respective headings in the text.

(6) The verbs *sarra* and *wāfaqa*

What characterizes the two verbs constituting the subject of this chapter (among others, especially *a'jaba*), is the fact that the noun phrase with the semantic role of experiencer functions as the object, whereas with verbs such as *iṣṭahā* and *kariha* it functions as the subject.¹¹²

This distinction appears in several writings.¹¹³ In *Muqaddima* two consecutive chapters are dedicated to verbs “requiring the *fā'il*” and those “requiring the *maf'ul*.”¹¹⁴ Whereas in the former verbs are discussed whose subject is the experiencer, e.g., *iṣṭahā* and *kariha*, the latter revolves around verbs whose object is the experiencer: *sarra*, *a'jaba* and probably also *wāfaqa*.¹¹⁵ Some grammarians also present a test designed to decide whether the noun phrase with the semantic role of experiencer is the *fā'il* in the nominative, or the *maf'ul* in the accusative, by substituting a pronoun for it: it is the former if the pronoun is *-tu/a/i*, and the latter if it is *-nī* or *-ka/i*,¹¹⁶ e.g., *wāfaqa 'abda llāhi mā aqḍaba zaydan* and *wāfaqanī/wāfaqaka/i*.¹¹⁷ In similar vein, it is stated in this chapter that nouns substituting *-nī* take the accusative, whereas those that substitute *-tu/a/i* take the nominative.¹¹⁸ In the second part of the chapter illustrations are given of sentences with independent relative clauses introduced by *mā*, but the argument could not be reconstructed from the surviving fragments.

(7) *qaṭ'*

The chapter revolves around *qaṭ'*, a term which is said here to be equivalent to the Baṣran term *ḥāl* (circumstantial qualifier), e.g., *aqbala 'abdu llāhi musri'an*.

See the discussion in Sec. 6 (7).

¹¹² See Palmer, *Grammatical roles and relations*, pp. 9–10, 27, 40–44; Goldenberg, *Semitic languages*, pp. 194–197.

¹¹³ See also Owens, *Early Arabic grammatical theory*, pp. 185, 192.

¹¹⁴ The verbs in question are referred to as *ḥurūf* in the two titles (see Talmon, “*Muqaddima*,” p. 143).

¹¹⁵ Ḥalaf al-Aḥmar, *Muqaddima*, pp. 67–68. The manuscript reads, according to the editor's vocalization, *wāqifun*, which he reconstructs as *awqafa*; yet *wāfaqa* is much more plausible here.

¹¹⁶ Ibn Qutayba, *Talqīn*, p. 161 (note that in the illustration of *sarra* one should read *zaydan*); al-Zajjājī, *al-Jumal*, pp. 11–12.

¹¹⁷ Ibn Qutayba, *Talqīn*, p. 161.

¹¹⁸ See also al-Mubarrad, *al-Muqtaḍab*, vol. 1, pp. 151 ff., vol. 3, pp. 191 ff; Luḡda, *al-Naḥw*, p. 224; Ibn al-Sarrāj, *al-Uṣūl*, vol. 1, pp. 174–176. See Owens, *Early Arabic grammatical theory*, pp. 185, 192.

(8) The verbal noun functioning as a cognate accusative

The verbal noun functioning as the so-called *mafūl muṭlaq* takes the accusative case. The chapter opens with the following definition: “The *maṣḍar* is that whose last part is derived from its first part,” by which is meant that in sentences such as *ḥaraja ‘abdu llāhi ḥurūjan ḥasanan*, the verbal noun functioning as the cognate accusative, here *ḥurūjan*, is derived from the preceding verb, here *ḥaraja*. Two remarks are in order regarding this definition. First, it is not surprising that the term *maṣḍar* is used not only at the morphological level, in the sense of verbal noun, but at the syntactic level as well, in the sense of cognate accusative, for this is a very common practice in grammatical writings.¹¹⁹ Second, in this definition the author of the T-S grammar mixes syntactic function and syntactic construction, that is, whereas the definiendum is the *maṣḍar* (as a syntactic function), the definiens refers to the entire construction in which this function occurs.

On the theory that the *maṣḍar* is derived from the verb, see Sec. 6 (12).

(9) Sound feminine plural

A test is designed to reveal whether or not a final /t/ in a plural form belongs to a plural suffix (-āt): if the /t/ appears also in the diminutive form of the singular, it is not a part of this suffix; otherwise it is, in which case its accusative marker is /i/. It is inferred that the diminutive test is only needed when the singular also ends with /t/; otherwise the /t/ of the plural belongs to a plural suffix. Thus, one says *daḥaltu abyātaka* with an /a/, since the singular is *bayt*, and its diminutive is *buyayt*; in *ra’aytu banātika* or *aḥawātika* the /t/ belongs to a plural suffix, as the diminutive of *bint*, for example, is *bunayya*; in *āraynāhu āyātina* the /t/ belongs to a plural suffix, as the singular, *āya*, does not end with /t/ in the first place.

On the use of the term *ḥafḍ* in reference to /i/ as an accusative marker, see the discussion in Sec. 6 (1).

(10) Sound masculine plural

If a plural noun ends with /n/ but its singular does not, this /n/ takes the unchanging vowel /a/ and is elided when the noun is annexed, e.g., *ṣāliḥūna* (nom.), *ṣāliḥīna* (acc. and gen.) and *ṣāliḥū* (nom. annexed). Otherwise, the /n/ carries the vowels marking the various cases and remains in annexion, e.g., *masākīn* (sg. *miskīn*).

¹¹⁹ See Carter, *Arab linguistics*, p. 344, where this practice is also criticized by a late grammarian.

On the use of *naṣb* with reference to the final unchanging /a/ of the sound masculine plural, see Sec. 6 (1).

(11) Topicalized construction

In the so-called topicalized construction, where a resumptive pronoun functions as the object of the verb, the antecedent takes the nominative, e.g., *‘abdu llāhi laqītuhu*. This noun is referred to as *al-mafūl bihi*, yet it is uncertain whether this term applies to the noun in such constructions, to an underlying structure from which this construction may be said to ‘transform’ (< *‘abda llāhi laqītu*) or to its semantic role (patient).

On the theory that the resumptive pronoun assigns the nominative to the antecedent, see Sec. 6 (2).

(12) Emphasizers

Emphasizers are analogized to adjectival attributes, probably with respect to the agreement in case with the modified noun, e.g., *ra’aytu iḥwataka ajma’īna*.

On *al-asmā’ al-makniyya*, see Sec. 6 (11).

(13) The indicative mood

The imperfect verb takes the indicative. This statement probably applies to the default case only, that is, wherever no subjunctive or jussive operator is introduced (see below). Illustrations follow, where it is stated that the final *nūn* (of either the dual or the sound masculine plural form) is the indicative marker.

On the theory that the preformatives assign the indicative, see Sec. 6 (5).

(14)–(15) The subjunctive and the jussive

These chapters present operators of the subjunctive and jussive, followed by illustrative sentences, where it is stated that the elision of the final *nūn* (that is, *-ni* and *-na*) in several forms constitutes the subjunctive or jussive marker. The *nūn* of the 2f.pl. is said to constitute the feminine marker, and therefore it is not elided.

On *li-* and *ḥattā* (and possibly also *aw*) as operators of the subjunctive (rather than a concealed *an*), and on *kamā* as an operator of the subjunctive in the sense of *kaymā*, see Sec. 6 (6).

(16) Genitive

The chapter presents operators of the genitive, e.g., *katabtu ilā zaydin*. It is also stated that if a noun occurs after the genitive, it takes the nominative, e.g., *‘inda ‘abdi llāhi mālun kaṭīrun*, and that when a transitive verb is introduced, the

following noun takes the accusative as its object, e.g., *wajadtu 'inda 'abdi llāhi mālan kaṭīran*.

One may infer that *mā ša'n*, *mā bāl* and *mā li* (or: *māli*) featuring on the list of operators of the genitive have the status of a constituent assigning the genitive, rather than just *ša'n*, *bāl* and *li*-, although their mention in this fashion can also be ascribed to their idiomatic quality.¹²⁰ These three are discussed together in *al-Muḥallā*: the accusative in constructions introduced by them is explained by the noun being their *ḥabar*,¹²¹ e.g., *mā bālu zaydīn qā'imān*, *mā ša'nuka wāqifān* and *mā laka sākitān*.¹²² They are thus regarded, at least with respect to their relationship with the noun in the accusative, as one constituent. For example, with respect to the verses *fa-mā li-lladīna* (according to the orthography in the edition, but see below) *kafarū qibalaka muḥṭi'īna* (Qur'ān 36:70) and *fa-mā lahum 'an-i l-taḍkirati mu'riḍīna* (Qur'ān 74:49), it is stated that the accusative is due to the nouns' being *ḥabar mā li*; on the other hand, on another occasion a genitive pronoun is incorporated in such a statement: *li-annahu ḥabar mā lakum*.¹²³ *mā li*- is indeed the most surprising here, for its second element is a preposition, rather than a noun, and is orthographically inseparable from the following noun. However, in four Qur'ānic verses this is not the case, as *li*- is written after *mā* separately.¹²⁴ Al-Farrā' remarks on the first (Qur'ān 4:78), that *mā li* (or *māli*) is used frequently, to the point that people comprehend¹²⁵ (viz. reanalyze) this *li*- as part of *mā*.¹²⁶ However, he says, since it is the preposition *li*-, *waqf* (pause) is impermissible after it.¹²⁷ Opinions nevertheless vary regarding the permissibility of *waqf* after *li*-.¹²⁸ Abū Bakr Ibn al-Anbārī says that Ḥalaf told him that according to al-Kisā'ī, *mā lakum*

¹²⁰ The first two feature in a similar list in al-Naḥḥās, *al-Tuffāḥa*, p. 18.

¹²¹ See Sec. 6 (2); see also Talmon, "al-Mas'ala al-zunburiyya," pp. 151–152; Abū Ḥudayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, pp. 91–92; cf. Dayf, *al-Madāris*, p. 207.

¹²⁴ One of them is Qur'ān 36:70 mentioned above; see Ibn al-Anbārī, *al-Hā'āt*, pt. 2, pp. 67–70; Bergsträßer and Pretzl, *Die Geschichte des Korantexts*, p. 30.

¹²⁵ *tawahhamū*, see Baalbaki, "Tawahhum."

¹²⁶ For a discussion and historical reconstruction of interrogative *mā-l* in modern dialects, see Singer, *Neuarabische Fragewörter*, pp. 176 ff. Cf. *mā li* > the noun *māl* (*ibid.*, p. 177; Brockelmann, *Grundriß*, vol. 1, p. 291).

¹²⁷ Al-Farrā', *Ma'ānī*, vol. 1, p. 278.

¹²⁸ See, e.g., 'Umar and Makram, *Mu'jam*, vol. 4, p. 274.

(or: *laka*) are *ḥarfāni*, analogizing it with respect to *i'rāb* to *mā qīṣṣatukum* and *mā ša'nukum*.¹²⁹

The practice of presenting undifferentiated heterogenic lists of genitive operators under one term, characteristic of early pedagogical grammars, will be discussed in a study in preparation. On *ṣifa* see Sec. 6 (10). On the theory that the *ṣifa* assigns the nominative, see Sec. 6 (2).

(17) Words followed by the nominative

The chapter presents a list of words after which the noun generally takes the nominative, e.g., *innamā*, after which the two constituents (viz. the subject and the predicate) assign the nominative to each other, and *lawlā*, which itself assigns the nominative to the following noun. With *ayna*, for example, both the nominative and the accusative are possible after the noun in nominative, thus *ayna aḥūka jālisun/jālisan*; this is possible since the sentence is complete even without the last constituent.

The term *ḥurūf al-raf* in early pedagogical grammars will be discussed in a study in preparation.¹³⁰ On the theory that the subject and the predicate assign the nominative to each other, see Sec. 6 (2). On *lawlā* as the operator of the nominative, see Sec. 6 (3).

(18) The passive

The chapter discusses several passive constructions. The subject of a passive verb takes the nominative, whereas its objects take the accusative, e.g., *kusiya aḥūka ṭawban jadīdan*, except when preceded by a preposition, e.g., *wuhiba li-'abdi llāhi alfāni*. Thus, one may say *u'ṭiya alfāni*, in which *alfāni* is the subject, but also *u'ṭiya alfayni*, where a pronominal subject is incorporated in the verb. From the surviving fragments of the later parts of the chapter it can only be glimpsed that the verbs *sammā* and *kanā* are discussed.

The term *lam yusamma fā'iluhu*, as well as the term *maf'ūl* with reference to the subject of the passive verb, are commonly used in medieval Arabic grammatical tradition.¹³¹ On the term *fi'l mā lam yusamma fā'iluhu*, see Sec. 6 (2).

(19) Diptotes

The genitive in diptotes is marked with /a/ without *tanwīn*. The categories of diptotes mentioned in the surviving fragments of the chapter are:

¹²⁹ Abū Bakr Ibn al-Anbārī, *Idāh*, p. 182.

¹³⁰ See also Peled, "Amal and 'ibtidā'," pp. 159 ff.

¹³¹ See Owens, *Early Arabic grammatical theory*, *passim*.

nouns terminating in *-ān*, *fā'ūl* and nouns with verbal patterns (or: with the pattern *af'al* — see footnote 73).

On the terms (*lā*) *yanṣarifu*, see Sec. 6 (15).

(20)–(22) *Nisba*

This series of chapters revolves around nouns ending with the so-called *yā' al-nisba*. The beginning of (20) is missing, and may have been preceded by other chapters on this issue. Many changes in the stem occasioned by the presence of *yā' al-nisba* are mentioned, for example: *'abd al-dār* → *'abdarī/dārī*; *'ānāt* → *'ānī*, since the singular form is used as a rule; yet this does not apply to *al-madā'in* and *al-baḥrayn*, in order to differentiate between their *nisba* forms and those of *madīna* (or: *al-madīna*, i.e. Medina) and *baḥr*, respectively; *raqaba* → *raqabānī*; *marmā* → *marmawī*; *huḍayl* → *huḍalī*, although it is stated that the form in accordance with the *qiyās* would be **huḍaylī*; *al-yaman* → *yamānin / yamānī*.

(23) Sound feminine plurals of the patterns *fV'la*

This chapter discusses the sound feminine plural forms of nouns, including adjectives, of the patterns *fV'la*. In some of these, a vowel is added in the plural form between the second and third radicals, in which case the term *tatqīl* is used, e.g., *ḥamza* → *ḥamazāt*, *da'wa* → *da'awāt*. The term *tahfīf* designates the lack of such a vowel, e.g., *bayḍa* → *bayḍāt*.

On the term *raf'* referring to the internal vowel /u/ of the pattern *fu'la*, e.g., *qurba*, see Sec. 6 (1).

(24) Spelling of III-w and III-y verbs

The spelling of the final letter of III-w verbs of the pattern *fa'ala* is ى ("alif"), but it is ے ("yā") in III-y verbs. If our interpretation of this passage is correct, the final letter of the forms *yaf'alu* and *taf'alu* is said to be ے ("yā") in III-w verbs as well. The end of the chapter is missing.

6. 'Kūfan' and pedagogical traits

The historicity of the Baṣran-Kūfan opposition, as two rival grammatical 'schools', is one of the most hotly debated issues in the study of the history of Arabic grammatical thought. We have no intention to tackle this question here;¹³² rather, we shall now present several points which seem to be fairly well-established, and which suffice for the present study. Taking Sībawayhi (d. ca. 180/796) and al-Farrā' (d. 207/822) as our points of departure, we can detect in their writings opposing theories, notions and terms, to which some of the *Streitfragen* between 'Baṣrans' and 'Kūfans', portrayed in later treatises, correspond. Generally speaking, a number of scholars, such as Ṭa'lab (d. 291/904) and Abū Bakr Ibn al-Anbārī (d. 327/939 or 328/940),¹³³ affiliated themselves with the Kūfans/al-Farrā', and others, such as al-Mubarrad (d. 285/898) and Ibn al-Sarrāj (d. 316/928), with the Baṣrans/Sībawayhi; the latter, and most of their successors, form what can safely be regarded as the mainstream of Arabic grammatical tradition. In the following pages we shall frequently use the label 'mainstream grammar(ians)', with illustrations mainly, but not exclusively, extracted from the writings of Sībawayhi, al-Mubarrad and Ibn al-Sarrāj, and the label 'Kūfans' with reference to al-Farrā', Ṭa'lab and Abū Bakr Ibn al-Anbārī.¹³⁴ One should not infer from these labels that either of these two groups is homogenous, nor should these labels be taken as implying the existence of two rival schools of grammar in al-Baṣra and al-Kūfa during the 8th-early 9th centuries.

As for the T-S grammar, the self-affiliation of its author as 'Kūfan' is inferred not only from the terminology, notions and theories embraced in this grammar, around which the lion's share of this section will revolve, but more directly from his allusion to the Baṣrans in Ch. 7. In that chapter, dedicated

¹³² An up-to-date overview of the different views of modern scholars is Baalbaki, "Introduction," especially pp. xxxix-xlii.

¹³³ Not to be confused with the much later Ibn al-Anbārī (d. 577/1181), the author of, *inter alia*, the celebrated *al-Inṣāf*.

¹³⁴ We shall also refer to *Kitāb al-maqṣūr wa-l-mamdūd*, whose ascription to Niṭawayhi (d. 323/935) is uncertain (see the editor's note on pp. 103-104; Sezgin, GAS, p. 144), to *al-Ṣāhibī*, on whose author Carter says: "The last important grammarian to be regarded as a genuine Kūfan, and whose work survives, for example, is Ibn Fāris, d. 395/1005" ("Development of Arabic linguistics," p. 265; see also Ḍayf, *al-Madāris*, p. 241), but Weil (*Streitfragen*, p. 67) and Sezgin (GAS, p. 194) are less decisive, to al-Mu'addib's *Daqā'iḳ al-taṣrīf* (completed in 338/949), on whose author's Kūfan inclinations see Baalbaki, "Unfamiliar morphological terminology," albeit with much reservation, as he also characterizes him as a 'Baghdadian' (see below) (see also Sezgin, GAS, p. 190), as well as to al-Ṭabarī's (d. 310/923) grammatical views, via Abū Ḥudayr's study (Abū Ḥudayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*).

according to its title, to *qaṭʿ* (on this term, see (7) below), the author states near the beginning that the Baṣrans' term for *qaṭʿ* is *ḥāl*, whereas in the rest of the chapter the term *qaṭʿ* is used exclusively. It is unfortunate that there are several missing words in the manuscript where the author most probably alludes directly to the group that uses the term *qaṭʿ*, viz. his in-group, in contradistinction to the Baṣrans' term *ḥāl*.

Note that, whatever the historical roots of the Baṣran-Kūfan opposition, we are not entitled to speak of a strict dichotomy between 'Baṣrans' and 'Kūfans'; even in medieval sources grammarians are frequently said to have adopted the views of the 'rival school'. As for the earlier period, Talmon's extensive studies are of major importance, at least in their capacity as a scrutiny of the early sources, even if one does not adhere to his controversial conclusion, viz. his theory of an 'Old Iraqi School' of grammar.¹³⁵ As for later times, some grammarians are said to have studied under both 'Baṣrans' and 'Kūfans' and to have mixed between the teachings of the two schools; some even speak of a third, 'Baghdadi school' of grammar, though this appellation is not conceived in any uniform fashion by different scholars.¹³⁶

There is a corpus of several early pedagogical writings which is of interest for our endeavour to characterize the T-S grammar, the latter itself being a pedagogical grammar, in fact the only extant pedagogical 'Kūfan' grammar, as far as we know.¹³⁷ In a study in preparation it will be shown that a group of early pedagogical books, including the T-S grammar, share a number of distinctive traits. Five of the books which belong to this corpus are unproblematic with respect to their authorship: Ibn Kaysān (d. 299/912 or 320/932),¹³⁸ *al-Muwaffaqī*;

¹³⁵ In brief, this theory states that al-Farrā' was more faithful than al-Ḥalīl and Sībawayhi to an old Iraqi grammatical school; in other words, al-Ḥalīl and Sībawayhi were innovators vis-à-vis the Iraqi grammatical thinking of their time. Later grammarians projected the differences between al-Ḥalīl and Sībawayhi, on the one hand, and al-Farrā', on the other, onto earlier generations. This theory is developed in many studies, culminating in Talmon, *Eighth-century Iraqi grammar*. Summaries are Talmon, "The first beginnings of Arabic linguistics"; Baalbaki, "Introduction," pp. xviii–xix.

¹³⁶ See Weil, *Streitfragen*; al-Maḥzūmī, *Madrasat al-Kūfa*; Troupeau, "La grammaire à Baḡdād"; Dayf, *al-Madāris*; Sezgin, *GAS*, pp. 151 ff.; Owens, *Early Arabic grammatical theory*; Carter, "Development of Arabic linguistics"; Baalbaki, "Introduction," p. xli.

¹³⁷ But cf. Carter, "Development of Arabic linguistics," pp. 264–265 regarding Ibn Šuqayr, *al-Muḥallā* and Sezgin, *GAS*, pp. 126–127, regarding Ḥalaf al-Aḥmar, *Muqaddima*.

¹³⁸ This grammarian is said to have mixed the teachings of the two schools. See Troupeau, "La grammaire à Baḡdād," p. 399; Sezgin, *GAS*, p. 158 ("jedoch neigte er etwas mehr den Basrensern zu"); Carter, "Development of Arabic linguistics," p. 265.

Luġda (d. ca. 311/923), *al-Naḥw*; al-Naḥḥās (d. 338/950), *al-Tuffāḥa*;¹³⁹ al-Zajjājī (d. ca. 337/949), *al-Jumal*; and al-Zubaydī (d. 379/989), *al-Wāḍiḥ*. The authorship of three other books is, however, controversial: *Muqaddima* (attributed to Ḥalaf al-Aḥmar [d. ca. 180/796]),¹⁴⁰ *Talqīn* (attributed to Ibn Qutayba [d. 276/889])¹⁴¹ and *al-Muḥallā* (attributed to Ibn Šuqayr [d. 315/927 or 317/929]),¹⁴² the latter was also published as *al-Jumal*, with an attribution to al-Ḥalīl Ibn Aḥmad).¹⁴³ Another book is included in Sadan, *Edition*, basically a critical edition of a very late grammatical treatise, in one of whose manuscripts an otherwise unknown treatise is incorporated, and therefore published as an appendix to the main edition.¹⁴⁴ Needless to say, it is only from its content that we conclude its earlier provenance, as we shall see presently. Due to some striking points of similarity between these four and the five former works (to be discussed elsewhere), we shall hypothesize that they were all composed during the 10th century or earlier. It should be noted that not all early pedagogical grammars belong to this corpus; this epoch also witnessed pedagogical writings conforming to the mainstream tradition, such as Ibn al-Sarrāj, *al-Mūjaz* and al-Fārisī (d. 377/987), *al-Īḍāḥ*.

The recognition of the existence of traits characterizing writings which belong to this corpus of early pedagogical treatises is of major methodological importance for our study. One direct consequence is that one should not take every trait found in a pedagogical book but generally lacking in mainstream grammars as a reflection of a ‘heterodox’ — ‘Kūfan’ or dissenting — grammatical

¹³⁹ But see Sezgin, *GAS*, pp. 47, 208.

¹⁴⁰ A comprehensive study of this book and its attribution is Talmon, “*Muqaddima*.” See also Sezgin, *GAS*, pp. 118, 126; Owens, *Early Arabic grammatical theory*, pp. 179 ff.; Talmon, “Two early ‘non-Sībawaihian’ views,” pp. 285–286; *idem*, “*Lamḥa ḥawla iḥtilāf al-kūfiyyīna wa-l-baṣriyyīna*,” pp. 191–193; Carter, “Development of Arabic linguistics,” p. 264; Baalbaki, “The book,” pp. 127–128.

¹⁴¹ This treatise was studied by Carter (“16th century grammatical experiment”), who surmises that it was written “no earlier than the 10th/16th century” (p. 267). Talmon (“Two early ‘non-Sībawaihian’ views,” p. 285, footnote 32), on the other hand, believes “on the basis of several elements of its linguistic teaching” that “its late 9th-century provenance is correct.” See also Sezgin, *GAS*, p. 154, footnote 1.

¹⁴² This grammarian is also said to have mixed the teachings of the two schools. See Troupeau, “La grammaire à Baġdād,” p. 399; Sezgin, *GAS*, p. 162 (“... galt trotz seiner Neigung für die Kufenser ... als Eklektiker ...”); Carter, “Development of Arabic linguistics,” *passim*; Baalbaki, “Introduction,” p. xxix.

¹⁴³ See Sezgin, *GAS*, pp. 47, 162; Owens, *Early Arabic grammatical theory*, pp. 179 ff.; Ryding, “Morphosyntactic analysis”; *idem*, “Aspects of the genitive”; Talmon “Two early ‘non-Sībawaihian’ views,” pp. 285–286; Carter, “Development of Arabic linguistics,” p. 264; Baalbaki, “Introduction,” pp. xxviii–xxix.

¹⁴⁴ For details see Sadan, *Edition*, p. 4.

theory adhered to by its author. However, one cannot rule out the possibility that later grammarians, upon encountering such non-mainstream traits, attributed them to the Kūfans (as a ‘back-projection’). On the other hand, one should not, of course, automatically ascribe any non-mainstream phenomenon appearing in such a book to its pedagogical character.

In addition to the pedagogical nature of the T-S grammar, the fact that it is a very short volume, as well as the unfortunate fact that parts of it are missing, should also be taken into consideration as two factors which have obvious ramifications for our study.

In the remainder of this section we shall present fifteen points in the T-S grammar which bear on its classification as ‘Kūfan’. These points will be examined vis-à-vis early grammatical writings, both pedagogical and more theoretically oriented works, alongside traditional accounts by later grammarians.

It should be noted that we do not aim at completeness, that is, not every trait in the T-S grammar potentially bearing on the Baṣran-Kūfan opposition was found worthy of note. For example, we do not find worthy of discussion the fact that the rare possibility of using *kay* as an operator of the genitive is not mentioned, although Kūfans and Baṣrans are said to have disagreed on this issue.¹⁴⁵

(1) Vowel and *i’rāb* terms

a. The author of the T-S grammar makes use of the term *ḥafḍ* (Chapters 2, 3, 5, 9, 10, 16, 18 and 19), and never *jarr*. The former is regarded as a Kūfan and the latter as a Baṣran term;¹⁴⁶ the former term is indeed the one used by Sībawayhi

¹⁴⁵ The view attributed to the Baṣrans is also that of most mainstream grammarians, including Sībawayhi, although there is, as far as we know, no evidence for the Kūfan view in early sources (this *mas’ala* does not occur among those for which Baalbaki [“Arab grammatical controversies”] found evidence in the early sources). See Carter, *Arab linguistics*, p. 117; Sadan, *Subjunctive*, pp. 65–67. Another example is the so-called *ištiḡāl*: we discuss in (2) below constructions such as ‘*abdu llāhi laqītuḥu*, accounted for in Ch. 11, where only the nominative is sanctioned, that is, no mention is made of the construction in which the first noun takes the accusative, e.g., ‘*abda llāhi laqītuḥu*. One may conjecture that this silence reflects al-Farrā’s view that the latter is permissible only when introduced by, e.g., *wa-* or *fa-*, a condition not shared by Sībawayhi and his successors (see Baalbaki, “Arab grammatical controversies,” p. 16).

¹⁴⁶ See Weil, *Streitfragen*, p. 72, footnote 1; al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 258, 311; Ḍayf, *al-Madāris*, p. 228; al-Sāmarrāī, “*A-lanā madāris naḥwiyya?*,” p. 20; Carter, *Arab linguistics*, p. 449; *idem*, “Development of Arabic linguistics,” p. 266.

and the latter by al-Farrā' and Ṭa'lab.¹⁴⁷ This notwithstanding, the term *ḥafḍ* is ubiquitous in mainstream writings, along with *jarr*.¹⁴⁸

b. The term *raf* is used in the T-S grammar not only for *i'rāb* (Chapters 1–8, 10, 11, 13, 14, and 16–18) but also for an internal vowel (*qUrba* and *ṣUlma*) (Ch. 23). Moreover, although the term *naṣb* is used mostly for *i'rāb* (Chapters 1–10, 14 and 16–19), it is not restricted to it. First, it refers to the final /a/ in the sound masculine plural (Ch. 10), but since it is a final vowel it is not a decisive indication that for this author *naṣb* applies to every /a/.¹⁴⁹ Second, it is used with reference to the final /a/ of the perfect verb (3m.sg.), and is explained by the fact that it is a *māḍī* verb (Ch. 4); it is unclear, however, whether or not it is regarded by the author of the T-S grammar as *i'rāb* (or quasi-*i'rāb*).¹⁵⁰ The terms *ḥafḍ* and *jazm* are used only for *i'rāb* (Chapters 2, 3, 5, 9, 10, 16, 18 and 19, and Ch. 15, respectively). The term *kasr* is used in reference to the two tokens of non-*i'rāb* /i/ in nouns of the pattern *fī'ila* (Ch. 23).¹⁵¹

¹⁴⁷ See Owens, *Early Arabic grammatical theory*, pp. 159, 196. See also Niftawayhi, *al-Maqṣūr*, *passim*; al-Mu'addib, *Daqā'iq*, e.g., pp. 15, 504 (see Baalbaki, "Unfamiliar morphological terminology," p. 40), but also *jarr* (al-Mu'addib, *Daqā'iq*, p. 42).

¹⁴⁸ See al-Sāmarrā'ī, "A-lanā madāris naḥwiyya?," p. 20; Owens, *Early Arabic grammatical theory*, p. 202 (also *ibid.*, p. 195); Versteegh, *Arabic grammar*, p. 9; Carter, "Development of Arabic linguistics," p. 267; Baalbaki, "Introduction," p. xl.

¹⁴⁹ Cf. Abū 'Ubayda's use of *jarr* for the final /i/ of the dual (Talmon, *Eighth-century Iraqi grammar*, p. 240); al-Zubaydī's use of *jarr* for an auxiliary vowel /i/ in a verb in *jazm* (*al-Wāḍih*, pp. 87–88; note that for al-Zubaydī the imperative is *majzūm* rather than *mabnī*; cf. the meaning of *jarr* attributed to al-Ḥalīl in al-Ḥ'ārizmī, *Mafātīḥ*, p. 45 [see Fischer, "The chapter on grammar," p. 99; Versteegh, *Arabic grammar*, p. 18], but this may be merely a coincidence) and of *raf* and *jazm* for the final /u/ and zero-vowel in *qaṭṭu* and *qaṭ*, respectively (*al-Wāḍih*, p. 271; see also p. 302); and an anonymous writer's use of *naṣb* for the /a/ of *nūn al-jam'* (e.g., *muslimūna*) and of *ḥafḍ* for the /i/ of *nūn al-taṭniya* (e.g., *raḥulāni*) and the /i/ of III-y verbs in *jazm* (e.g., *yarmi*) (Sadan, *Edition*, pp. 135–136).

¹⁵⁰ In Ibn Šuqayr, *al-Muḥallā*, p. 58 = al-Ḥalīl, *al-Jumal*, p. 111, the *māḍī* is an illustration of the category *al-naṣb 'alā al-bunya* (an oxymoron for mainstream grammarians; see also Ibn Šuqayr, *al-Muḥallā*, p. 124 = al-Ḥalīl, *al-Jumal*, pp. 171–172 for *al-raf bi-l-bunya* [see also Ḥalaf al-Aḥmar, *Muqaddima*, p. 92], Ibn Šuqayr, *al-Muḥallā*, pp. 153 ff. = al-Ḥalīl, *al-Jumal*, pp. 199 ff. for *al-ḥafḍ bi-l-bunya* [see also Sadan, *Edition*, p. 136; Ḥalaf al-Aḥmar, *Muqaddima*, p. 91] and Ibn Šuqayr, *al-Muḥallā*, p. 181 = al-Ḥalīl, *al-Jumal*, p. 225 for *al-jazm bi-l-bunya*). See also Ibn Šuqayr, *al-Muḥallā*, p. 177 = al-Ḥalīl, *al-Jumal*, p. 221; Ibn Qutayba, *Talqīn*, p. 166; Sadan, *Edition*, p. 128, 135; al-Mu'addib, *Daqā'iq*, pp. 15, 17, 26–27 (see Baalbaki, "Unfamiliar morphological terminology," pp. 25, 27–29). Note also the use of the term *i'rāb* with reference to the perfect in Niftawayhi, *al-Maqṣūr*, p. 112.

¹⁵¹ In fact, the terms *raf* etc. are mostly used here, strictly speaking, not with direct reference to the vowels in question, but rather to the syntactic position of the word, which entails a certain *i'rāb*

The distribution of the terms *raf* and *naṣb* (with some reservations about the latter) in the T-S grammar seems to be Farrā'ian, as al-Farrā' applies the terms, which Sībawayhi restricts to *īrāb*, to non-*īrāb* vowels as well.¹⁵² Sībawayhi is followed, in this practice, by mainstream grammarians, as well as by Abū Bakr Ibn al-Anbārī.¹⁵³

(2) The operators of the predicative constituents

The author of the T-S grammar seems to adhere to a Farrā'ian view with respect to his conception of sentence types.

A well-known notion held by the mainstream grammarians is the dichotomy between a verbal sentence (the so-called *jumla fi'liyya*) and a nominal sentence (*jumla ismiyya*). The predicative constituents of the former consist of a verb (*fi'l*) followed by, or incorporating, a subject (*fā'il*), to which the verb assigns

marker, mostly a vowel. This is suggested, first, by the fact that it is not the final consonants which are mostly said to take the *raf* etc., but rather the entire word (but compare Kasher, "Terminology of vowel and *īrāb*," pp. 142–143, 148). Moreover, the author of the T-S grammar uses the term *'alāma* in the sense of mood marker in cases where it is not a vowel (Chapters 13–15). Note, however, that in Ch. 9 the author uses the terms *naṣb* and *ḥafḍ* in reference to both vowels and positions: a striking example is his use of the term *ḥafḍ* with reference to the /i/ vowel as a case marker of the accusative of the sound feminine plural; here it is also said that the /t/ takes the *ḥafḍ*. On the other hand, when the /t/ is not part of the plural suffix, the author says: ... *fa-nṣib fī al-naṣb wa-ḥfiḍ fī al-ḥafḍ*, where the first token of each term refers to a vowel (as a case marker, needless to say) and the second to a syntactic position. In similar vein, it is said (Ch. 19) that the diptotes in the *ḥafḍ* take the *naṣb* without *tanwīn*, i.e. the genitive marker is /a/ (the text is not certain, however).

¹⁵² See Owens, *Early Arabic grammatical theory*, pp. 159–160; Kinberg, *Lexicon*, pp. 108 ff., 222 ff., 290 ff., 795 ff.. This use of the terms is occasionally attributed to the Kūfans (See al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 315–316; Carter, "Development of Arabic linguistics," p. 266; Baalbaki, "Unfamiliar morphological terminology," p. 41; cf. al-Ḥ'arizmī, *Mafātīḥ*, p. 43). Sībawayhi is not entirely consistent here, since he sometimes does use these terms with reference to non-*īrāb* vowels (see Talmon, *Eighth-century Iraqi grammar*, pp. 241–243; Kasher, "Terminology of vowel and *īrāb*," p. 143, footnote 11). Deviations are found in other early writings as well (see Talmon, *Eighth-century Iraqi grammar*, pp. 240–241). Talmon (*Eighth-century Iraqi grammar*, pp. 239 ff., 286) explains this on the grounds that the Sībawayhian dichotomy is an innovation, and therefore diversions from it are reflections of the older system; this is also commensurate with Versteegh's (*Arabic grammar*, pp. 125–130; "Zayd Ibn 'Alī," p. 18) findings, and with his theory that the terms which would later come to denote *īrāb* were originally associated with the articulation of vowels, and linked to the Syriac system (Versteegh, *Arabic grammar*, pp. 29–31; see also Talmon, "The first beginnings of Arabic linguistics," p. 250).

¹⁵³ See Owens, *Early Arabic grammatical theory*, p. 198. But see Carter's ("16th century grammatical experiment," p. 270) note on the use of these terms in the *Talqīn*.

the nominative. The predicative constituents of the latter consist of a subject (*mubtada'*) and a predicate (*ḥabar*), which may, in its turn, consist of a clause. Whereas grammarians generally agree that the operator assigning the nominative to this subject is an abstract operator termed *al-ibtidā'*, their views are at variance regarding the operator assigning the nominative to the predicate, viz. whether it is the *ibtidā'*, the *mubtada'*, or both together. Some grammarians add a third sentence type, *jumla ẓarfīyya*, whose predicative constituents consist of a prepositional phrase or a locative/temporal qualifier (*ẓarf*), followed by a subject, to which the prepositional phrase or the *ẓarf* assigns the nominative. Another type occasionally mentioned is the conditional sentence (*jumla šarṭīyya*), which is of no relevance here.¹⁵⁴

Al-Farrā's conception was radically different, for he held a "unified conception of the kernel sentence structure in terms of subject and predicate (*ism* and *fi'l/ḥabar*)."¹⁵⁵ This notion seems to be reflected in "the mutual effect of subject and nominal predicate" (sentence type (i))¹⁵⁶ — this is the view that Ibn al-Anbārī ascribes to the Kūfans in general,¹⁵⁷ and that was adopted by Abū Bakr Ibn al-Anbārī.¹⁵⁸ In the "so-called topicalized structures" (ii), the resumptive

¹⁵⁴ Modern studies of Arabic grammatical tradition are replete with discussions of issues pertaining to the notion of sentence types. See Levin, "Distinction between nominal and verbal sentences"; Peled, *Sentence types*. Our concise sketch of this notion is, needless to say, a generalization, especially with respect to the indigenous terms.

¹⁵⁵ Talmon, "Two early 'non-Sībawaihian' views," p. 278. See also Owens, *Early Arabic grammatical theory*, pp. 172–174; Talmon, "The philosophizing Farrā'," pp. 272 ff.; *idem*, *Eighth-century Iraqi grammar*, pp. 165 ff. (where Talmon claims that this system is earlier than Sībawayhi's); Kinberg, *Lexicon*, pp. 201 ff., 350 ff., 595 ff.; Abū Ḥudayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, pp. 89 ff. Cf. Ibn Qutayba, *Talqīn*, p. 116 (*fi'l laysa*).

¹⁵⁶ Talmon, "Two early 'non-Sībawaihian' views," p. 279. See also al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 279–280; Ḍayf, *al-Madāris*, p. 168; Owens, *Early Arabic grammatical theory*, pp. 170 ff.; Talmon, *Eighth-century Iraqi grammar*, pp. 168–169. For this notion, al-Farrā' occasionally uses the term *rāfa'a*, translated by Kinberg (*Lexicon*, p. 310) as "to mutually affect the nominative case upon (with regard to the two members of a nominal clause)." This concept is referred to by some grammarians as *tarāfu'*, i.e. mutual assignment of the nominative (see, e.g., Bohas, Guillaume and Kouloughli, *The Arabic linguistic tradition*, p. 69). Ibn Kaysān (*al-Muwaffaqī*, p. 109) mentions this view, but without any ascription.

¹⁵⁷ Ibn al-Anbārī, *al-Inṣāf*, pp. 21 ff..

¹⁵⁸ See Owens, *Early Arabic grammatical theory*, p. 197. Several much later grammarians adopted this view; see, e.g., Bohas, Guillaume and Kouloughli, *The Arabic linguistic tradition*, pp. 70–72. Al-Mu'addib is inconsistent with regard to the operator of the *mubtada'* (see *Daqā'iq*, p. 131 vs. pp. 458–460, 469–473 [see Baalbaki, "Unfamiliar morphological terminology," p. 41]; see also al-Mu'addib, *Daqā'iq*, p. 386).

pronoun is regarded by al-Farrā' as assigning the nominative to the subject.¹⁵⁹ In subject-verb constructions (iii), the verb assigns the nominative to the subject, whether it precedes it or follows it,¹⁶⁰ so that against the mainstream conception of SV and VS as two distinct sentence types, for al-Farrā' this is merely an issue of relative position of these two constituents.¹⁶¹ Ibn al-Anbārī, on the other hand, ascribes to the Kūfans the view that the operator is the resumptive pronoun in the verb.¹⁶² When the predicative constituents of the sentence consist of a noun and a prepositional phrase or a locative/temporal qualifier (iv),¹⁶³ it is the preposition(al phrase) or the locative/temporal qualifier that assigns the nominative to the noun.¹⁶⁴ This is the notion Ibn al-Anbārī ascribes to the Kūfans, as well as to al-Aḥfaš (according to one of his two opinions) and al-Mubarrad.¹⁶⁵

There is direct evidence that in three out of the four sentence types the author of the T-S grammar adhered to the views of al-Farrā':

(i) It is stated in Ch. 17 that in the sentence *innamā 'abdu llāhi muḥsinun*, 'abdu llāhi and *muḥsinun* assign the nominative to each other, and the case is the same with *ka-annamā 'abdu llāhi aḥūka*. A chapter discussing the basic noun-noun construction is lacking.

In the same chapter, the author of the T-S grammar presents the choice between nominative and accusative in sentences introduced by *kayfa* and *ayna*, viz. *ayna aḥūka jālisU/An* and *kayfa aḥūka ṣāni'U/An*, by referring to the constituent in question as *fi'l*. It may be the case that the word *fi'l* here conveys an extended sense

¹⁵⁹ Talmon, "Two early 'non-Sībawaihian' views," p. 279. See also Ḍayf, *al-Madāris*, pp. 168–169. But cf. Owens, *Early Arabic grammatical theory*, p. 176; Kinberg, *Lexicon*, pp. 275, 529 ff.; Ibn al-Anbārī, *al-Inṣāf*, p. 25.

¹⁶⁰ Talmon, "Two early 'non-Sībawaihian' views," p. 279.

¹⁶¹ See Talmon, "The philosophizing Farrā'," p. 273.

¹⁶² Ibn al-Anbārī, *al-Inṣāf*, p. 254.

¹⁶³ On the notion of *ṣifa*, see (10) below.

¹⁶⁴ Talmon, "Two early 'non-Sībawaihian' views," p. 279. See also Owens, *Early Arabic grammatical theory*, pp. 170–171; Talmon, *Eighth-century Iraqi grammar*, pp. 170–173.

¹⁶⁵ Ibn al-Anbārī, *al-Inṣāf*, pp. 27 ff., and see Baalbaki, "Arab grammatical controversies," p. 15. It is inferred from al-Mubarrad, *al-Muqtaḍab*, vol. 2, pp. 354–355 that he approves of the view that a *zarf* can assign the nominative to the following noun (in his interpretation of Qur'ān 23:35); in another discussion (*ibid.*, vol. 1, p. 157) he classifies the *zarf* + subject construction as an independent sentence type, on a par with nominal and verbal sentences (all of which are able to function as *ṣilas* of relative pronouns). However, from yet another discussion (*ibid.*, vol. 3, pp. 130–131) it is inferred that it is an underlying verb which assigns the nominative in these sentences (nevertheless, not the *ibtidā'*). See also Ibn Kaysān, *al-Muwaffaqī*, p. 123. On later grammarians' concept of *jumla ẓarfīyya* see Peled, *Sentence types*, pp. 147 ff.

of ‘predicate’, that is, a class under which both predicate and ‘transformed predicate’¹⁶⁶ are subsumed. However, *fi’l* here may alternatively mean ‘participle’ (see (13) below).

Another possible case of such a use of *fi’l* is the term *fi’l mā lam yusamma fā’iluhu* (Ch. 18). This term is generally applied to the passive verb; however, in this chapter it seems to refer to the accusative in passive constructions, e.g., *u’ṭītu mālan qalīlan* (unless the text is corrupt or the wording is sloppy). It is thus reminiscent of the (uncommon) term *ḥabar mā lam yusamma fā’iluhu* in the same sense.¹⁶⁷

(ii) As stated in Ch. 11, it is the resumptive pronoun which assigns the nominative in sentences such as *‘abdu llāhi laqītu* and *ṭawbuka labistuhu*.

(iii) The case of the *fā’il* is explained only by its being *fā’il*, a term that is used only for the subject following its verb (see Chapters 1–5 and 7).¹⁶⁸ In Ch. 4 it is stated that “preposed” verbs take the singular form, e.g., *qāma zaydun/l-zaydāni/l-zaydūna*, whereas when “postposed” they take the dual and plural forms (as well), e.g., *al-zaydāni qāmā* and *al-zaydūna qāmū* (besides *zaydun qāma*), where the term *ism* is used in reference to the subject. Although this is what one expects from a grammarian who does not adhere to the notion of *ibtidā’*,¹⁶⁹ accounts of this contrast in terms of “preposing” and “postposing” are also presented by grammarians who do adhere to this notion, most of whom also use the term *ism* here; this may be regarded as a trait of the genre of pedagogical grammars.¹⁷⁰

¹⁶⁶ See Talmon, *Eighth-century Iraqi grammar*, pp. 182–194: “... underlying its *naṣb* position in given structures it serves as predicate (*ḥabar*) whose original nexal relations with a certain subject have been impaired by the creation of another set of syntactic relations. As a result, this nominal is deprived of its first-degree predicate status and transforms to a ‘second-rate’ predicate position marked grammatically by *naṣb*” (*ibid.*, p. 183). See also Levin, “*kāna wa’axawātuhā*,” pp. 193–196; Owens, *Early Arabic grammatical theory*, p. 173.

¹⁶⁷ See, e.g., al-Zajjājī, *al-Jumal*, p. 78. This term will be discussed elsewhere.

¹⁶⁸ See also the explanation of the nominative of the subject of the passive verb (Ch. 18).

¹⁶⁹ See Abū Bakr Ibn al-Anbārī, *Idāh*, p. 149; *idem*, *Marsūm*, p. 24. This formulation is also found in al-Mu’addib, *Daqā’iq*, p. 135, but, as mentioned in footnote 158, this grammarian is inconsistent with regard to the operator of the *mubtada’*.

¹⁷⁰ See Ibn Kaysān, *al-Muwaffaqī*, pp. 108, 109; Luḡda, *al-Naḥw*, p. 225; al-Naḥḥās, *al-Tuffāḥa*, p. 17; al-Zajjājī, *al-Jumal*, p. 10; al-Zubaydī, *al-Wāḍiḥ*, pp. 196 ff. Needless to say, even if the term *ism* is to be regarded as a remnant of a Kūfan-like system, its use does not betray a Kūfan affiliation. Note that in Ch. 1 it is stated that the *fā’il* takes the nominative, whether it is preposed or postposed, and that the *mafūl bihi* takes the accusative, also whether preposed or postposed. According to the illustrations which follow, what is meant here is the relative order between the *fā’il* and the *mafūl bihi*, not their

(iv) In Ch. 16, in his discussion of the sentence *‘inda ‘abdi llāhi mālun kaṭīrun*, after stating that *‘inda* assigns the genitive to *‘abdi llāhi*, the author of the T-S grammar says that the nominative in *māl* is due to the *ṣifa*. Elsewhere he states that in the sentence *kam māluka*, it is *kam* which assigns the nominative to *māluka* (Ch. 17). He himself does not classify *kam*, but the view that *kam* is a compound of *ka-* and *mā* is not only ascribed to the Kūfans, but also attested in al-Farrā’.¹⁷¹

(3) *lawlā* as a nominative operator

According to the author of the T-S grammar, *lawlā* assigns the nominative to the following noun (Ch. 17).

This view is attributed to the Kūfans, whereas the Baṣrans are said to have held that the cause of the nominative is the *ibtidā’*.¹⁷² Baalbaki has already demonstrated that the former view is in fact al-Farrā’'s, the latter — Sībawayhi's and al-Mubarrad's.¹⁷³

(4) Transitivity

The terms used by the author of the T-S grammar to designate the relationship between a verb and its object (*mafūl bihi*) are *waqa‘a ‘alā* and *awqa‘a ‘alā*, serving as the explanation of the accusative of the object (Chapters 1–3).¹⁷⁴ The root WQ’ is used by grammarians in general to refer to the relationship between an operator and the constituent it operates on, and specifically between verbs and nouns taking the accusative.¹⁷⁵ There are, however, two points of interest in the use of this root by the author of the T-S grammar: first, he never

relative positions vis-à-vis the verb, e.g., *daḥala ‘abdu llāhi dāraka* vs. *a‘jabat ‘abda llāhi dāraka*. This conclusion is corroborated by the appearance of this formulation in al-Naḥḥās, *al-Tuffāḥa*, p. 17 (but cf. Omar, “Grammatical studies in early Muslim Egypt,” p. 243).

¹⁷¹ See al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 231–233; Baalbaki, “Arab grammatical controversies,” pp. 19–20.

¹⁷² See al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 134, 283, 289; Dayf, *al-Madāris*, pp. 171, 206.

¹⁷³ Baalbaki, “Arab grammatical controversies,” pp. 15–16.

¹⁷⁴ There is no testimony in this book (or in other early writings, as far as we know; see Baalbaki, “Arab grammatical controversies”) for the views ascribed by Ibn al-Anbārī (*al-Inṣāf*, pp. 40 ff.) to Kūfan grammarians regarding the operator of the *mafūl*, viz. that it is the verb and its *fā’il* jointly, or the *fā’il* alone.

¹⁷⁵ One should not infer that the ‘relationship’ mentioned here is the very relationship of operation. The divergence in meaning this term conveys for different grammarians, and its links with other terms such as *‘amila* and *ta‘addā*, are beyond the scope of this study; see, e.g., Owens, *Early Arabic grammatical theory*, pp. 115–116, 162–166, 174–177, 183, 191 and Carter’s (Review, p. 474) criticism. See also Kinberg, *Lexicon*, pp. 970 ff.

uses the term *ta'addā*, which is most commonly used in this sense in mainstream writings; second, he uses (Ch. 16) the term *fi'l wāqī* as a term denoting “transitive verb,” i.e. as a property of the verb itself, in which case the term does not take any complement referring to the accusative noun of the verb in question. This term is considered as ‘Kūfan’,¹⁷⁶ and is indeed the term used by al-Farrā’,¹⁷⁷ as well as in al-Mu’addib’s *Daqā’iq*,¹⁷⁸ *Kitāb al-‘ayn* (attributed to al-Ḥalīl Ibn al-Ḥmad)¹⁷⁹ and *al-Muḥallā*,¹⁸⁰ but the term *ta'addā* is also used in these three works.¹⁸¹ On the other hand, the term has not been detected in mainstream writings.

(5) The preformatives as the operators of the imperfect verb

According to the author of the T-S grammar, the preformatives assign the indicative mood to the imperfect verb (Ch. 13).

This view is ascribed in later sources to the Kūfans, or to some of them, especially al-Kisā’ī,¹⁸² and is adhered to by Abū Bakr Ibn al-Anbārī, al-Mu’addib, the authors of *al-Muḥallā* and *Talqīn* as well as, probably, the anonymous author in Sadan, *Edition*.¹⁸³

¹⁷⁶ See Weil, *Streitfragen*, p. 72, footnote 1; Dayf, *al-Madāris*, p. 200; al-Sāmarrā’ī, “A-*lanā madāris naḥwiyya?*,” p. 21.

¹⁷⁷ See Kinberg, *Lexicon*, pp. 610–611, 969. Moreover, one of the chapters of al-Farrā’'s lost book, *Kitāb al-ḥudūd*, is reported to have been entitled *ḥadd al-fi'l al-wāqī* (see Sezgin, *GAS*, p. 132).

¹⁷⁸ See al-Mu’addib, *Daqā’iq*, e.g., p. 49 (see Baalbaki, “Unfamiliar morphological terminology,” p. 26).

¹⁷⁹ See Talmon, *Arabic grammar*, p. 421. On this dictionary and its authorship, see Talmon, *Arabic grammar*; Schoeler, “Wer ist der Verfasser”; Baalbaki, *The Arabic lexicographical tradition*, pp. 282–292.

¹⁸⁰ See Owens, *Early Arabic grammatical theory*, p. 191.

¹⁸¹ E.g., al-Mu’addib, *Daqā’iq*, p. 148 (see Baalbaki, “Unfamiliar morphological terminology,” p. 26); Ibn Šuqayr, *al-Muḥallā*, p. 14 = al-Ḥalīl, *al-Jumal*, p. 73; Talmon, *Arabic grammar*, pp. 206, 397. On al-Ṭabarī's use of both terms, see Abū Ḥudayr, *al-Ru'ya al-naḥwiyya ‘inda al-Ṭabarī*, p. 146.

¹⁸² See al-Sīrāfi, *Šarḥ*, vol. 3, p. 192; Ibn al-Anbārī, *al-Inṣāf*, p. 226; Ibn Ya’īš, *Šarḥ*, vol. 4, pp. 219–220; al-Suyūṭī, *Hamī*, vol. 1, pp. 526–527; Dayf, *al-Madāris*, p. 169. Two other views ascribed to Kūfan grammarians are discussed elsewhere.

¹⁸³ Abū Bakr Ibn al-Anbārī, *al-Mudakkar*, vol. 1, p. 208; *idem*, *Īdāh*, pp. 145–146; Ibn Šuqayr, *al-Muḥallā*, p. 176 = al-Ḥalīl, *al-Jumal*, p. 219; Ibn Qutayba, *Talqīn*, pp. 223, 339–340; al-Mu’addib, *Daqā’iq*, pp. 15, 27, 29 (cf. *ibid.*, pp. 17, 28, 131 [where this grammarian explicitly embraces the ‘Baṣran’ view]; see Baalbaki, “Unfamiliar morphological terminology,” pp. 27–29, 41). In Sadan, *Edition*, p. 128 the preformatives are referred to as *ḥurūf al-‘awāmil*. It is not mentioned among the views for which Baalbaki (“Arab grammatical controversies”) found evidence in the early sources. It is possible that underlying this theory is “an early theorem that considers the a vs. u contrast in the perf. vs. impf. verbs a significant i’rabi feature” (Talmon, *Eighth-century Iraqi grammar*, p. 242 [regarding an occasion in which Sībawayhi uses the term *naṣb* with reference to perfect verbs]; on the view that the imperfect is derived from the

(6) Subjunctive operators

Ch. 14 is dedicated to “*kay* and its sisters,” which are said to assign the subjunctive to the following verb. Of these, some are of interest:

a. *li-* and *ḥattā* are included in this list, without any mention of concealed *an*.

The Kūfans are claimed to maintain that *li-* and *ḥattā* assign the subjunctive directly, whereas for the Baṣrans what is responsible for this mood is said to be a concealed *an*; the latter view is indeed that of most mainstream grammarians, including Sībawayhi.¹⁸⁴ However, in most early pedagogical grammars examined here, *li-* and *ḥattā* are presented as operators of the subjunctive, some of them in a list of such operators.¹⁸⁵ This trait may, therefore, be regarded as characteristic of pedagogical writings,¹⁸⁶ and not necessarily as stemming from any Kūfan inclination.

b. It is unclear whether the second occurrence of *an* in the list should be read *aw*. If it does, the text reflects a view attributed to the Baṣran grammarian al-Jarmī, and sometimes to al-Kisāʾī,¹⁸⁷ which differs both from the view of Sībawayhi and other mainstream grammarians, i.e. that the subjunctive following *aw* is assigned by a concealed *an*, and from the one ascribed to the Kūfans, i.e. that it is due to the principle of *ḥilāf*,¹⁸⁸ an opinion which may be traceable to

perfect, see Versteegh, *The Arabic language*, pp. 84–85).

¹⁸⁴ On *li-* see Sadan, *Subjunctive*, pp. 266–268; on *ḥattā*, see *ibid.*, pp. 238–242. See also al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 96, 156, 282, 284–285; Ḍayf, *al-Madāris*, pp. 207, 235; Carter, *Arab linguistics*, pp. 108–109, 116–119, 124–125; Abū Ḥuḍayr, *al-Ruʾya al-naḥwiyya ʿinda al-Ṭabarī*, pp. 171–174, 223–224.

¹⁸⁵ Ibn Kaysān, *al-Muwaffaqī*, pp. 108, 121–122; Luḡda, *al-Naḥw*, p. 226; al-Naḥḥās, *al-Tuffāḥa*, p. 19; al-Zajjājī, *al-Jumal*, pp. 182–184; al-Zubaydī, *al-Wāḍiḥ*, pp. 88–89; Ibn Šuqayr, *al-Muḥallā*, pp. 18, 227–228 = al-Ḥalīl, *al-Jumal*, pp. 76–77, 269–270; Ibn Qutayba, *Talqīn*, pp. 147–148; Sadan, *Edition*, p. 131. See also al-Ḥʾārizmī, *Mafātīḥ*, pp. 50–51. Less clear is Ḥalaf al-Aḥmar, *Muqaddima*, pp. 71–72. This trait is found as late as the celebrated *al-Ājurrūmiyya* of Ibn al-Ājurrūm (d. 723/1323) (Carter, *Arab linguistics*, see the previous footnote). It is also adhered to by al-Muʾaddib, *Daqāʾiq*, pp. 40–41. This issue is not found among the *masāʾil* for which Baalbaki (“Arab grammatical controversies”) located evidence in the early sources.

¹⁸⁶ Not necessarily early ones; see the previous footnote.

¹⁸⁷ For references see Sadan, *Subjunctive*, p. 123; al-Maḥzūmī (*Madrasat al-Kūfa*, pp. 306–307) ascribes this view to the Kūfans in general, save al-Farrāʾ.

¹⁸⁸ On this notion, see al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 293 ff.; Carter, “*Šarfet ḥilāf*”; Sadan, *Subjunctive*, pp. 316–317.

al-Farrā'.¹⁸⁹ However, such formulations appear also in some other pedagogical grammars.¹⁹⁰

c. *kamā* is included in this list, and is said to convey the sense of *kaymā*.

It is claimed that the Kūfans (and al-Mubarrad) held the view that *kamā* occurs with the same meaning as *kaymā*, and may assign the subjunctive to the following verb,¹⁹¹ whereas the Baṣrans argued that it neither occurs in this sense nor can it assign the subjunctive.¹⁹²

As an answer to Sībawayhi's question, al-Ḥalīl is quoted as claiming that *kamā* conveys the meaning of *la'alla* and is not a subjunctive operator, but is rather followed by a verb in the indicative.¹⁹³ The difference of opinions regarding *kamā* is attested already by Ṭa'lab.¹⁹⁴

(7) *qaṭ'*

The author of the T-S grammar uses the term *qaṭ'* as the counterpart of what, for him, *ahl al-baṣra* term *ḥāl* (the circumstantial qualifier) (Ch. 7). It is characterized as following an already complete sentence and as being indefinite.

The term *qaṭ'* is occasionally regarded as the Kūfan counterpart of the Baṣran term *ḥāl*.¹⁹⁵ The noun to which the term *qaṭ'* applies is characterized as being indefinite, albeit qualifying a definite noun, thus taking the accusative.¹⁹⁶ The term *qaṭ'* itself is interpreted in two ways, each highlighting one side of the same coin, to wit, the "cutting of" is understood either structurally,¹⁹⁷ or as signifying the deletion of the definite article.¹⁹⁸

¹⁸⁹ See Sadan, *Subjunctive*, pp. 121–123. This difference of opinions applies also to the so-called *fā' al-sababiyya* and *wāw al-ma'iyya* (See Sadan, *Subjunctive*, pp. 168–170 and 192–194 respectively; also Carter, "Ṣarfet ḥilāf"; Baalbaki, "Arab grammatical controversies," pp. 22–23).

¹⁹⁰ See Ibn Kaysān, *al-Muwaffaqī*, pp. 108, 122; Luḡda, *al-Naḥw*, p. 226; al-Naḥḥās, *al-Tuffāḥa*, pp. 19–20. On this trait in *al-Ājurrūmiyya*, see Carter, *Arab linguistics*, pp. 108, 118 ff.

¹⁹¹ On the different opinions with regard to the mood following *kaymā*, see Sadan, *Subjunctive*, pp. 70–71.

¹⁹² See Sadan, *Subjunctive*, p. 76. See also al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 319–320 (where this opinion is also ascribed to al-Mubarrad); Ḍayf, *al-Madāris*, p. 231.

¹⁹³ Sībawayhi, *al-Kitāb*, vol. 1, p. 408. See Sadan, *Subjunctive*, pp. 72–73. For opinions of later grammarians see *ibid.*, p. 75.

¹⁹⁴ See Sadan, *Subjunctive*, pp. 74–75. See also Ḍayf, *al-Madāris*, p. 231; al-Mu'addib, *Daqā'iq*, p. 40. This issue does not appear among the *masā'il* to which Baalbaki ("Arab grammatical controversies") found testimony in the early sources.

¹⁹⁵ See Owens, *Early Arabic grammatical theory*, p. 117.

¹⁹⁶ See Talmon, *Eighth-century Iraqi grammar*, pp. 182 ff.

¹⁹⁷ See Carter, "Ṣarfet ḥilāf," p. 297; Talmon, "*Muqaddima*," p. 148; *idem*, *Eighth-century Iraqi grammar*, pp.

The use of the term *ḥāl* is not restricted to Sībawayhi and mainstream grammarians. It is used even by al-Farrā', although, according to Kinberg, the latter restricts it to transitional states.¹⁹⁹ It should also be noted that al-Farrā''s *qaṭ'* and Sībawayhi's *ḥāl* are not co-extensive; for instance, the former is also applied to accusative nouns in exceptive constructions.²⁰⁰ The term *qaṭ'* (in this sense) is not used by Sībawayhi. In addition to the Kūfans it is used also in some pedagogical grammars and early writings; its use in pedagogical writing can be explained as reflecting either a pedagogical or an eclectic trend (i.e. of grammarians 'mixing' between different frameworks — see above), these two explanations not being mutually exclusive.²⁰¹

(8) *nasaq*

The author of the T-S grammar makes use of the term *nasaq*, never '*atf*', with reference to conjunction (Ch. 5).

The term *nasaq* is sometimes regarded as the Kūfan counterpart of the Baṣran '*atf*'.²⁰² Of these two terms, Sībawayhi uses only '*atf*'.²⁰³ Al-Farrā', on the other hand, uses both;²⁰⁴ the term *nasaq* never ceased to be used, also by mainstream grammarians (especially in the form of the term '*atf al-nasaq*').²⁰⁵

¹⁹⁸ See Owens, *Early Arabic grammatical theory*, pp. 122–123. See also Ibn Qutayba, *Talqīn*, pp. 208–209; Sadan, *Edition*, p. 136.

¹⁹⁹ See Kinberg, *Lexicon*, pp. 194–196, 808–809. Note that if our reading of the main illustration is correct, it includes a non-transitional adjective, viz. *nabīl*.

²⁰⁰ See Carter, "*Ṣarf et ḥilāf*," p. 297; Talmon, "*Muqaddima*," pp. 148–149; Kinberg, *Lexicon*, p. 194; Abū Ḥuḍayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, pp. 34 ff.

²⁰¹ In addition to the references above, see also Talmon, "*Muqaddima*," pp. 147–152; Owens, *Early Arabic grammatical theory*, pp. 194, 196; Versteegh, *Arabic grammar*, p. 133.

²⁰² See al-Maḥzūmī, *Madrasat al-Kūfa*, p. 315; Ḍayf, *al-Madāris*, pp. 167, 202; al-Sāmarrā'ī, "*A-lanā madāris naḥwiyya?*," p. 20; Carter, "Development of Arabic linguistics," p. 266; Baalbaki, "Unfamiliar morphological terminology," p. 40; Abū Ḥuḍayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, pp. 158–159.

²⁰³ See Troupeau, *Lexique-index*, p. 143.

²⁰⁴ See Kinberg, *Lexicon*, pp. 485 ff., 792 ff.

²⁰⁵ On the term *nasaq*, see, e.g., al-Mubarrad, *al-Muqtaḍab*, vol. 4, p. 14; Ḍayf, *al-Madāris*, pp. 167–168; al-Sāmarrā'ī, "*A-lanā madāris naḥwiyya?*," p. 20. Cf. Owens, *Early Arabic grammatical theory*, *passim*, although some of his arguments regarding the distribution of this term should be reconsidered. The authors have been unable to locate the single occurrence where Ṭa'lab is said to use the term '*atf*' (*ibid.*, p. 94); it may thus be the case that this grammarian does use *nasaq* exclusively (see also Versteegh,

(9) *na't*

The term *na't* is used by the author of the T-S grammar to refer to adjectival attributes (Chapters 2, 7, 8 and 16). The term *ṣifa* is not used in this sense.

The term *na't* is sometimes regarded as the Kūfan counterpart of the Baṣran term *ṣifa* (also *waṣf*).²⁰⁶ Sībawayhi and al-Farrā' use both terms,²⁰⁷ and both also continued to co-exist in mainstream writings.²⁰⁸

(10) *ṣifa*

In his discussion of the sentence '*inda 'abdi llāhi mālun kaṭīrun*', after stating that '*inda*' assigns the genitive to '*abdi llāhi*', the author of the T-S grammar says that the nominative of *māl* is due to the *ṣifa* (Ch. 16; see (2) above). The term *ẓarf* (locative/temporal qualifier) does not appear in the T-S grammar.

The term *ṣifa* is frequently ascribed to the Kūfans as the counterpart of the Baṣran term *ẓarf*.²⁰⁹ It is used in this sense by grammarians identified as Kūfans, such as al-Farrā', as well as by some very early writers and in several pedagogical grammars (some using both terms), but it is used neither by Sībawayhi nor by the later grammarians of the mainstream (with only one possible

Arabic grammar, p. 153).

²⁰⁶ See al-Maḥzūmī, *Madrasat al-Kūfa*, p. 314; Ḍayf, *al-Madāris*, pp. 167, 202, 228; Carter, "Development of Arabic linguistics," p. 266. It is immaterial for the present discussion which categories, among the concordants, were subsumed under these terms by different grammarians (see Talmon, "Appositive 'atf';" *idem*, *Eighth-century Iraqi grammar*, *passim*; Owens, *Early Arabic grammatical theory*, *passim*), for our interest lies in the adjectival attribute only, the only category at stake in the T-S grammar.

²⁰⁷ See Troupeau, *Lexique-index*, pp. 203–204, 215–216; Kinberg, *Lexicon*, pp. 840 ff., 908–909, 914 ff. The frequencies of these terms in the two books seem to correspond to the attribution of the terms to the respective schools, but this hypothesis needs a further minute scrutiny of all their occurrences (especially in *Ma'ānī al-Qur'ān*), something that is beyond the scope of the present study.

²⁰⁸ See, e.g., al-Mubarrad, *al-Muqtaḍab*, vol. 4, p. 399, where *ṣifa*, *waṣf* and *na't* are used interchangeably. See also al-Maḥzūmī, *Madrasat al-Kūfa*, p. 314; Ḍayf, *al-Madāris*, pp. 167–168; Carter, "Development of Arabic linguistics," p. 267; Abū Ḥuḍayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, p. 161.

²⁰⁹ See Weil, *Streitfragen*, p. 72, footnote 1; al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 309–310; Ḍayf, *al-Madāris*, pp. 166, 200–201, 228; Owens, *Early Arabic grammatical theory*, p. 141; Carter, "Development of Arabic linguistics," p. 266; Baalbaki, "Unfamiliar morphological terminology," p. 40. This correspondence is mentioned already in *Kitāb al-'ayn* (see Talmon, *Arabic grammar*, p. 147) and by al-Farrā' (*al-Muḍakkkar*, p. 98) and Ibn Kaysān (*al-Muwaffaqī*, p. 111), albeit without any allusion to either the Kūfans or the Baṣrans.

exception, to the best of our knowledge).²¹⁰ There is, in fact, an important difference between the two terms, for *ṣifa* applies not only to locative/temporal nouns and prepositional phrases, but also to prepositions.²¹¹ The following important observation made by Versteegh is in order here: "... the later tradition perhaps even underestimated the doctrinal and theoretical differences between the two schools: it is clear that at least in some cases the difference in terminology is a sign of a real theoretical difference between Basrans and Kufans ..."²¹²

(11) *al-asmā' al-makniyya*

The author of the T-S grammar uses the term *al-asmā' al-makniyya* with reference to personal pronouns (Ch. 12). It is possible that he uses also the term *iḍmār* once (Ch. 18), when the pronoun in question is covert, i.e. incorporated in a verb.

The terms (*al-ism*) *al-makniyy* and *kināya*, in this sense, are sometimes mentioned as the Kūfan counterparts of the Baṣran terms (*al-ism*) *al-muḍmar* or *ḍamīr*.²¹³ Sībawayhi does not use terms of the root *KNY* in this sense.²¹⁴ Al-Farrā', on the other hand, uses terms derived from both *KNY* and *DMR* for personal pronouns.²¹⁵ Note, however, Kinberg's translation of the term *makniyy*: "a

²¹⁰ The only known occurrence of the term *ṣifa* presumably used in this sense in a mainstream writing is the closing sentence of al-Zajjājī, *Ḥurūf: tamma kitāb ḥurūf al-ma'ānī wa-l-ṣifāt* (p. 87) (see also Sezgin, GAS, p. 94). See also Ibn Durayd (d. 321/933), *Jamhara*, vol. 3, p. 1317, where the term *ṣifa*, in the 'Kūfan' sense, probably belongs to the parlance of the two earlier Baṣran (!) scholars quoted, or to (an) intermediary source(s) which Ibn Durayd quotes, for this term is never used in this sense in the rest of the dictionary.

²¹¹ See Carter, "16th century grammatical experiment," pp. 269–270; Owens, *Early Arabic grammatical theory*, pp. 141–151, 194, 197; Kinberg, *Lexicon*, pp. 909 ff.; Talmon, *Eighth-century Iraqi grammar*, pp. 232–236; Abū Ḥudayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, pp. 161–163 (some studies ignore, however, the fact that prepositional phrases are subsumed under *ẓarf* by Sībawayhi [as well as by most of his followers], e.g., *fihā* in Sībawayhi, *al-Kitāb*, vol. 1, p. 222).

²¹² Versteegh, *Arabic grammar*, p. 13. See also *ibid.*, pp. 193–194; Carter, "Development of Arabic linguistics," p. 266.

²¹³ See al-Sāmarrā'ī, "A-lanā madāris naḥwiyya?," p. 15; al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 190, 314; Dayf, *al-Madāris*, pp. 166, 200, 227; Carter, "Development of Arabic linguistics," p. 266; Abū Ḥudayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, pp. 152–155.

²¹⁴ See Troupeau, *Lexique-index*, pp. 185–186.

²¹⁵ See al-Sāmarrā'ī, "A-lanā madāris naḥwiyya?," pp. 15–16; Kinberg, *Lexicon*, pp. 360–361, 434–436, 731 ff. Al-Mu'addib uses both *KNY* and *DMR* (see *Daqā'iq*, e.g., pp. 20, 41; see Baalbaki, "Unfamiliar morphological terminology," pp. 40–41). See Owens, *Early Arabic grammatical theory*, pp. 196–197, on the use of *KNY* terms by Ṭa'lab and Abū Bakr Ibn al-Anbārī, and *ibid.*, p. 196 for their distribution in other writings (see also Niftawayhi, *al-Maqṣūr*, pp. 111, 122); see also Versteegh, *Arabic grammar*, p. 112; Abū

pronoun (generally a concrete morpheme, in contrast to *ism muḍmar ...*),”²¹⁶ the latter referring, *inter alia*, to pronouns incorporated in verbs and participles (e.g., *al-ism al-muḍmar fī qā'im*),²¹⁷ which fits the use of *iḍmār* made by the author of the T-S grammar.²¹⁸

Although the *DMR* terms prevailed, in this sense, the *KNY* terms did not disappear even from mainstream writings.²¹⁹

(12) The direction of derivation between the *maṣḍar* and the finite verb

The author of the T-S grammar characterizes the *maṣḍar* as derived from its verb (Ch. 8, where its functioning as the so-called *mafūl muṭlaq* is discussed, a term which does not appear in this treatise).

According to a well-known *Streitfrage* between Baṣrans and Kūfans, the former are said to have held that the finite verb is derived from the *maṣḍar*, whereas the latter allegedly maintained that it was the other way around.²²⁰ Whereas *al-Kitāb*,²²¹ as well as other treatises,²²² testify for the Baṣran view, al-Mu'addib, Ibn Fāris, the author of *Talqīn* and al-Ṭabarī adhere to the view attributed to the Kūfans.²²³

(13) The participle as *fi'l*

In Ch. 4, after the author of the T-S grammar illustrates the rule according to which verbs preceding their subject take the singular form, the only Qur'ānic verse he adduces contains, in fact, an active participle (Qur'ān 4:75). *Prima facie*, this is in line with al-Farrā's classification of participles as *fi'l*,²²⁴ as well as with

Ḥuḍayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, p. 153. On these terms in early writings, see Talmon, *Eighth-century Iraqi grammar*, pp. 204–207.

²¹⁶ Kinberg, *Lexicon*, p. 734.

²¹⁷ *Ibid.*, p. 358.

²¹⁸ The early history of these terms will be studied elsewhere.

²¹⁹ See, e.g., Ibn al-Sarrāj, *al-Uṣūl*, vol. 1, p. 149 (see al-Sāmarrā'ī, “A-lanā madāris naḥwiyya?,” p. 16). Ibn Ya'īš (d. 643/1245) (*Šarḥ*, vol. 2, p. 292) maintains that the terminological difference between the Baṣrans and the Kūfans with respect to these terms is that the Kūfans consider them synonyms, whereas the Baṣrans regard *muḍmar* as a hyponym of *makniyy*.

²²⁰ See Ibn al-Anbārī, *al-Inṣāf*, pp. 102 ff.; Ḍayf, *al-Madāris*, p. 196.

²²¹ Sibawayhi, *al-Kitāb*, vol. 1, p. 1.

²²² E.g., Ibn al-Sarrāj, *al-Uṣūl*, vol. 1, p. 122. See also Talmon, *Arabic grammar*, p. 153.

²²³ Al-Mu'addib, *Daqā'iq*, p. 44 (see Baalbaki, “Unfamiliar morphological terminology,” p. 41); Ibn Fāris, *al-Šāḥibī*, p. 106; Ibn Qutayba, *Talqīn*, p. 235; Abū Ḥuḍayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, p. 161. Cf. Baalbaki, “Arab grammatical controversies”; Talmon, *Eighth-century Iraqi grammar*, p. 207.

²²⁴ See Kinberg, *Lexicon*, pp. 591 ff. The term *al-fi'l al-dā'im* is regarded as the Kūfan term for participles:

the fact that Abū Bakr Ibn al-Anbārī also adduces this verse for exactly the same purpose, regarding it as a *fi'l*.²²⁵ However, the use of the term *fi'l* here may be symptomatic of the so-called *na't sababī* construction, in which the relationships between the participle and the following noun in the nominative are analogous to the verb-subject relationships. Thus one also finds the term *fi'l* used by al-Mubarrad in this context, not only with reference to participles,²²⁶ but also to adjectives such as *ḥasan*.²²⁷

Another occurrence where *fi'l* may convey this meaning was discussed in (2) above.

(14) Masculine singular verb + feminine plural subject

Ch. 4 concludes with the statement that when verbs precede a subject in the feminine plural, they take the masculine (singular) form.²²⁸

Al-Suyūṭī (d. 911/1505) attributes to the Kūfans the view that it is permissible to elide the feminine marker *-t* from the perfect when the subject is a feminine plural, which he illustrates with a sound feminine plural.²²⁹

Ibn Kaysān (*al-Muwaffaqī*, p. 108) mentions this term, attributing it to the Kūfans, in a paragraph discussing the number category of participles preceding their *asmā'*. See also Abū Bakr Ibn al-Anbārī, *al-Mudakkkar*, vol. 1, p. 135; Ibn al-Sarrāj, *al-Uṣūl*, vol. 1, p. 183, vol. 2, p. 244; al-Zajjājī, *Majālis*, p. 349; Ibn Fāris, *al-Ṣāhibī*, pp. 183, 264; al-Mu'addib, *Daqā'iq*, e.g., pp. 20, 90 (see Baalbaki, "Unfamiliar morphological terminology," p. 40). In Ibn Šuqayr, *al-Muḥallā*, pp. 4, 89 = al-Ḥalīl, *al-Jumal*, pp. 65, 141 the term *fi'l dā'im* (also: *fi'l*) is used with reference to active participles, with regard to the well known polemic over whether they must take the accusative when they interpose between two prepositional phrases. Abū Bakr Ibn al-Anbārī (*al-Zāhir*, vol. 1, p. 435) puts the term *dā'im* in the mouth of the Baṣrans in a morphological polemic regarding passive participles. See also al-Maḥzūmī, *Madrasat al-Kūfa*, pp. 237–241, 281–282, 310; Dayf, *al-Madāris*, pp. 166, 197, 227; Versteegh, *Linguistic causes*, p. 146; Carter, "Development of Arabic linguistics," p. 266. But cf. Talmon, "The philosophizing Farrā'," p. 271 (also Kinberg, *Lexicon*, pp. 256–257; Talmon, *Eighth-century Iraqi grammar*, pp. 208, 211–212; Abū Ḥudayr, *al-Ru'ya al-naḥwiyya 'inda al-Ṭabarī*, pp. 95–97. Ibn Šuqayr, *al-Muḥallā*, p. 60 = al-Ḥalīl, *al-Jumal*, p. 114; al-Zajjājī, *al-Jumal*, p. 7; al-Zubaydī, *al-Wāḍiḥ*, pp. 50, 81, 203).

²²⁵ Abū Bakr Ibn al-Anbārī, *Idāh*, p. 149.

²²⁶ See al-Mubarrad, *al-Muqtaḍab*, vol. 4, p. 155.

²²⁷ *Ibid.*, p. 158. See also Polotsky, "Indirect attribute," p. 166.

²²⁸ However, according to one of the suggestions we raise in footnote 25, the author of the T-S grammar in fact gives a counter-example to the rule he formulates, namely, a reading of Qur'ān 33:52 in which a verb in the feminine singular precedes the subject *niswa*.

²²⁹ Al-Suyūṭī, *Ham'*, vol. 3, p. 293.

General statements concerning the permissibility of these constructions are put forward both by al-Farrā' and by Abū Bakr Ibn al-Anbārī.²³⁰ According to these grammarians the preference for one gender over the other in constructions of this kind depends on whether the noun in question is in the plural of paucity or in the plural of abundance: when the subject is of the first type, which includes sound feminine plurals, it is preferable to use the masculine singular form for the preceding verb.²³¹

Al-Mu'addib's text is also of interest: having stated that a verb preceding a feminine singular or dual subject takes the feminine singular form (thus *qāmat-i l-mar'atu* and *qāmat-i l-mar'atāni*), he mentions first the masculine singular form of a verb preceding feminine plural (thus *qāma l-niswatu*), and only afterwards the feminine singular form (*wa-qāmat ayḍan*). This difference between the dual and the plural is explained by his claim that the singular and the plural may belong to different stems (e.g., *rajul* and *qawm*), which is not the case with the dual.²³²

For Sībawayhi, al-Mubarrad and Ibn al-Sarrāj, on the other hand, different factors are germane here, to wit, broken vs. sound plural, and animacy vs. inanimacy (which is tantamount to: grammatical feminine reflecting biological feminine vs. purely grammatical feminine). Using the masculine form for feminine inanimate nouns is permissible, including instances where they take the form of a sound feminine plural; as for broken vs. sound plural of feminine animate nouns, it is permissible to use the masculine form of the verb with broken plurals, both of animate and inanimate nouns.²³³ It is of importance for the present discussion that al-Mubarrad says explicitly that it is impermissible to use the masculine singular form of the verb before the sound feminine plural of animate nouns (e.g.,

²³⁰ Al-Farrā', *Ma'ānī*, vol. 1, p. 454; *ibid.*, vol. 3, p. 105, on participles (in *sababī* construction); Abū Bakr Ibn al-Anbārī, *al-Muḍakkkar*, vol. 2, pp. 214–215 (see also *ibid.*, vol. 1, p. 181).

²³¹ Al-Farrā', *Ma'ānī*, vol. 1, p. 435, vol. 2, pp. 124–125 (where al-Farrā' also explains that imperfect verbs designating paucity originally take the form *yafalna*, so that when they precede explicit subjects, the *-na* is elided); Abū Bakr Ibn al-Anbārī, *al-Muḍakkkar*, vol. 1, p. 210 (with attribution to Abū al-'Abbās [Ta'lab]), vol. 2, pp. 282–285 (with attribution to al-Kisā'ī). As correctly noted by the editor of Abū Bakr Ibn al-Anbārī, *al-Muḍakkkar* (vol. 1, p. 120, footnote 2), Ibn Ya'īš (*Šarḥ*, vol. 3, p. 376) ascribes this distinction to the Kūfans, albeit correlating the masculine with the plural of abundance and the feminine with the plural of paucity.

²³² Al-Mu'addib, *Daqā'iq*, p. 145. Cf. al-Zubaydī's theory below.

²³³ Sībawayhi, *al-Kitāb*, vol. 1, pp. 202, 204 (regarding the *sababī* construction); al-Mubarrad, *al-Muqtaḍab*, vol. 3, p. 349, vol. 4, p. 59; Ibn al-Sarrāj, *al-Uṣūl*, vol. 1, pp. 173–174. Cf. Ibn Ya'īš, *Šarḥ*, vol. 3, pp. 375–378; al-Suyūṭī, *Ham'*, vol. 3, p. 293.

**qāma muslimātuka*),²³⁴ and that Ibn al-Sarrāj formulates the same notion positively.²³⁵

The evidence from pedagogical grammars is unclear: in Luġda one finds, in a chapter about verbs taking the singular form before their subjects, the sentence *atānī niswatun fa-qulna*²³⁶ *lī kaḍā wa-kaḍā*, but he does not elaborate on this issue;²³⁷ al-Zubaydī claims that the speaker is free to choose between the masculine and the feminine forms of verbs preceding the feminine plural, yet when he explains the difference between this and the rule permitting only the feminine form before the feminine dual, he takes recourse to the fact that the plural is *sometimes* broken.²³⁸

Thus, although no grammarian among those discussed here mentions the singular form as the only option before feminine plurals (including sound feminine plurals of animate nouns) as the author of the T-S grammar possibly does,²³⁹ it seems that this fact brings him closer to al-Farrāʾ, Abū Bakr Ibn al-Anbārī and al-Muʿaddib (and possibly also to al-Kisāʾī and ʿAlab), than to Sībawayhi, al-Mubarrad and Ibn al-Sarrāj. However, here also there is some inconclusive evidence that the text of the T-S grammar may reflect a pedagogical trend.

(15) (*lā*) *yanṣarifu*

In Ch. 19, the author of the T-S grammar uses the terms *yanṣarifu* and *lā yanṣarifu* with reference to triptosis and diptosis, respectively.

The Kūfans are said to refer to triptotes and diptotes by terms derived from the root *JRY*, e.g., *mā yajrī*, whereas the Baṣrans are said to use terms from the root *ṢRF*, e.g., *mā yanṣarifu* (both examples for triptotes).²⁴⁰ The former is indeed used very frequently by al-Farrāʾ;²⁴¹ however, the latter is also utilized occasionally,²⁴² and both are used also by Abū Bakr Ibn al-Anbārī.²⁴³
