

PRE-PUBLICATION REVIEW COPY · SEPTEMBER 2026 · NOT FOR SALE

Did Sanskrit "evolve" until Pāṇini "codified" it? Are the Vedas merely "religious chants"? Did Sanskrit descend from Proto-Indo-European, or do Greek, Latin, and other Eurasian languages preserve reflections of Sanskrit's outward radiance?

Atomic Sanskrit takes a clear position. It argues that Sanskrit is engineered, that the Vedas serve as its distributed calibrant, and that Sanskrit's radiant architecture traveled beyond India.

The Source and Reference Companion makes the evidence behind that argument available for inspection.

The main book uses concise numbered endnotes so that its argument can proceed without forcing every reader through the complete apparatus. Each note carries a stable identifier. The same identifier leads to a full entry in this volume containing the primary-source passage, complete citation, translation, verification trail, source history, and an explanation of how the evidence supports the book.

Reference-only appendices preserve the larger datasets, calculations, comparisons, and technical demonstrations.

The main volume develops the case. The companion allows reviewers, critics, Sanskrit scholars, and interested readers to examine how that case was built.

About the Author

Parag Tope comes from Tatya Tope's family lineage and is the author of Tatya Tope's Operation Red Lotus, reviewed by The Hindu as "Revisionism at its best." An IIT Bombay dropout, mechanical engineer, entrepreneur, and University of Michigan Ross MBA, his work challenges inherited Western accounts of Indian history and civilization.
